

CLOCK MULTIPLIER WITH DELAY CONTROL AND PHASE ALIGNMENT

(Not Recommended for New Designs Use CDCF5801A as a Replacement)

FEATURES

- **Low-Jitter Clock Multiplier:** $\times 1$, $\times 2$, $\times 4$, $\times 8$
- **Programmable Bidirectional Delay Steps of 1.3 mUI**
- **Output Frequency Range of 25 MHz to 280 MHz**
- **Input Frequency Range of 12.5 MHz to 240 MHz**
- **Low Jitter Generation**
- **Single-Ended REFCLK Input With Adjustable Trigger Level (Works With LVTTTL, HSTL, and LVPECL)**
- **Differential/Single-Ended Output**
- **Output Can Drive LVPECL, LVDS, and LVTTTL**
- **Three Power Operating Modes to Minimize Power**
- **Low Power Consumption (< 190 mW at 280 MHz/3.3 V)**
- **Packaged in a Shrink Small-Outline Package (DBQ)**
- **No External Components Required for PLL**
- **Spread Spectrum Clock Tracking Ability to Reduce EMI (SSC)**

APPLICATIONS

- **Video Graphics**
- **Gaming Products**
- **Datacom**
- **Telecom**
- **Noise Cancellation Created by FPGAs**

DESCRIPTION

The CDCF5801 provides clock multiplication from a reference clock (REFCLK) signal with the unique capability to delay or advance the CLKOUT/CLKOUTB with steps of only 1.3 mUI through a phase aligner. For every rising edge on the DLYCTRL pin the CLKOUT is delayed by a 1.3-mUI step size as long as the LEADLAG input detects a low signal at the time of the DLYCTRL rising edge. Similarly for every rising edge on the DLYCTRL pin the CLKOUT is advanced by a 1.3-mUI step size as long as the LEADLAG pin is high during the transition. This unique capability allows the device to phase align (zero delay) between CLKOUT/CLKOUTB and any one other CLK in the system by feeding the clocks that need to be aligned to the DLYCTRL and the LEADLAG pins. Also it provides the capability to program a fixed delay by providing the proper number of edges on the DLYCTRL pin, while strapping the LEADLAG pin to dc high or low. Further possible applications are:

- Aligning the rising edge of the output clock signal to the input clock rising edge
- Avoiding PLL instability in applications that require very long PLL feedback lines
- Isolation of jitter and digital switching noise
- Limitation of jitter in systems with good ppm frequency stability

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

The CDCF5801 provides clock multiplication and division from a reference clock (REFCLK) signal. The device is optimized to have extremely low jitter impact from input to output. The predivider pins MULT[0:1] and post-divider pins P[0:2] provide selection for frequency multiplication and division ratios, generating CLKOUT/CLOUTKB frequencies ranging from 25 MHz to 280 MHz with clock input references (REFCLK) ranging from 12.5 MHz to 240 MHz. See [Table 1](#) for detailed frequency support. The selection of pins MULT[0:1] and P[1:2] determines the multiplication value of 1, 2, 4, or 8. The CDCF5801 offers several power-down/high-impedance modes, selectable by pins P0, STOPB and PWRDN. Another unique capability of the CDCF5801 is the high sensitivity and wide common-mode range of the clock-input pin REFCLK by varying the voltage on the VDDREF pin. The clock signal outputs CLKOUT and CLKOUTB can be used independently to generate single-ended clock signals. The CLKOUT/CLKOUTB outputs can also be combined to generate a differential output signal suitable for LVDS, LVPECL, or HSTL/SSTL signaling. The CDCF5801 is characterized for operation over free-air temperatures of -40°C to 85°C.

FUNCTIONAL BLOCK DIAGRAM

TERMINAL FUNCTIONS

TERMINAL		I/O	DESCRIPTION
NAME	NO.		
CLKOUT CLKOUTB	2018	O	Output CLK signal (low-noise CMOS) Complementary output CLK signal (low-noise CMOS)
DLYCTRL	7	I	Every rising edge on this pin delays/advances the CLKOUT/CLKOUTB signal by 1/768 th of the CLKOUT/CLKOUTB period (1.3 mUI). (E.g., for a 90-degree delay or advancement one needs to provide 192 rising edges). See Table 3 .
GND	5		GND for VDDREF and VDDPD
GNDO	17, 21		GND for the output pins (CLKOUT, CLKOUTB)
GNDP	4		GND for the PLL
GNDPA	8		GND for phase aligner, digital logic, and inputs P[0:2], MULT[0:1], STOPB, PWRDNB
LEADLAG	6	I	Controls whether the output CLK is delayed or advanced relative to REFCLK. See Table 3 .
MULT0 MULT1	15 14	I	PLL multiplication factor select. See Table 1 . MULT[0:1] = 10: ×16 MULT[0:1] = 11: ×8 MULT[0:1] = 00: ×4 MULT[0:1] = 01: ×2
NC	19		Not connected; leave pin floating or tied to GND.
P0	24	I	Mode control pins (see Table 1) 0 - Normal operation 1 - High-Z outputs and other special settings
P1	23	I	Post divider control (see Table 1) P[1:2] = 11: div2 P[1:2] = 10: div4 P[1:2] = 01: div8
P2	13		
PWRDNB	12	I	Active-low power-down state. CLKOUT/CLKOUTB goes low, See Table 2 . 0 - IC in power down 1 - Normal operation
REFCLK	2	I	Reference input clock
STOPB	11	I	Active low output disabler, PLL and PA still running, CLKOUT and CLKOUTB goes to a dc value as listed in Table 2 . 0 - Outputs disabled 1 - Normal operation
VDDO	16, 22		VDD for the output pin (CLKOUT, CLKOUTB) and power down circuit
VDDP	3		VDD for PLL and input buffer
VDDPA	9		VDD for phase aligner, digital logic, and inputs P[0:2], MULT[0:1], and STOPB
VDDPD	10		Reference voltage for inputs LEADLAG and DLYCTRL
VDDREF	1		Reference voltage for REFCLK

Table 1. Input-to-Output Settings

INPUT-TO-OUTPUT MULTIPLICATION-RATIO	INPUT FREQUENCY (MHz)		OUTPUT FREQUENCY (MHz)		PREDIVIDER		POST DIVIDER			NOTE
	FROM	TO	FROM	TO	MULT0	MULT1	P0	P1	P2	
8	12.5	35	100	280	1	0	0	1	1	Normal operation ⁽¹⁾
4	12.5	39	50	156	1	0		1	0	
	25	70	100	280	1	1		1	1	
2	12.5	39	25	78	1	0		0	1	
	25	78	50	156	1	1		1	0	
	50	140	100	280	0	0		1	1	
1	25	78	25	78	1	1		0	1	
	50	156	50	156	0	0		1	0	
	100	240	100	240	0	1		1	1	
CLKOUT high-impedance					X	X	1	0	0	Special mode of operation
CLOUTB high-impedance										
CLKOUT = high					X	X		0	1	
CLKOUTB = high										
CLKOUT = P2					X	X		1	X	
CLKOUTB = P2										

(1) There is some overlapping of the input frequency ranges for multiplication ratios of 1, 2, and 4. For example, an input frequency of 30 MHz for a multiplication ratio of four falls within both the 12.5 to 39-MHz range and the 25 to 70-MHz range. For best device operation in a case such as this, always select the input frequency range nearer to the top of the table.

APPLICATION INFORMATION

APPLICATION EXAMPLE

The following figure shows an example of using the CDCF5801 as a phase aligner de-skewing the unknown buffer delay of the two CDCV304s in the circuit. This circuitry would not be possible with a simple PLL because the feedback of the PLL would have the second CDCV304 in the loop, causing instability of the PLL due to a long delay.

Figure 9. Application Example

NOTE:

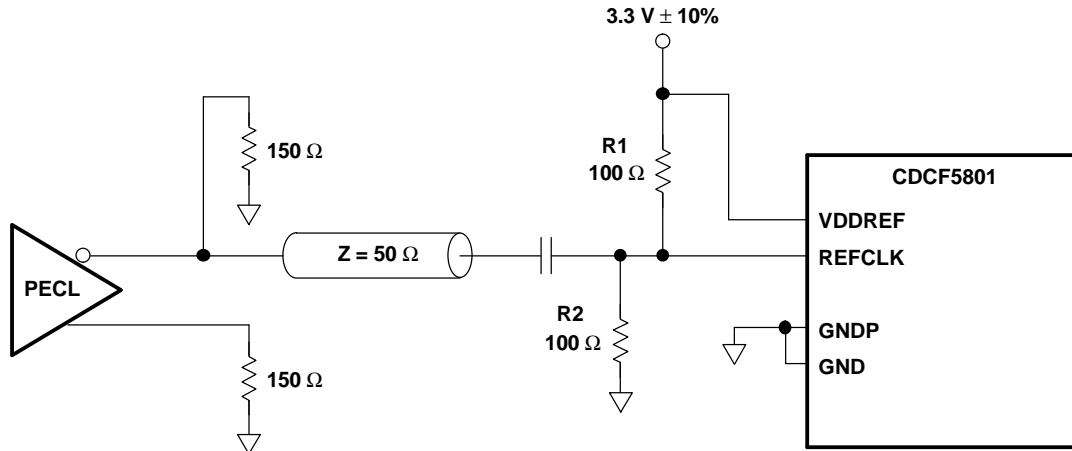

If an active element (microcontroller, ASIC, DSP, FPGA, DSP, etc.) is used in the CDCF5801 CLKOUT to DLYCTRL feedback loop, see application report SCAA075.

SELECTING VDDREF

Generally, VDDREF can be set to any value between 1.2 V and VDD. The setting of VDDREF directly influences the trigger voltage of the input. Special care must be taken when using small signal swings to drive the CDCF5801 input (e.g., PECL). It is recommended to connect VDDREF directly to VDD, ac-couple the REFCLK input, and rebias the signal.

The following circuit is recommended to drive the CDCF5801 from a differential clock signal like PECL.

APPLICATION INFORMATION (continued)

- A. NOTE: If more signal swing is required and an unterminated transmission is on option, then R1 and R2 can both be replaced with 10-k Ω resistors.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
CDCF5801DBQR	SSOP	DBQ	24	2500	330.0	16.4	6.5	9.0	2.1	8.0	16.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15) per side.
 - D. Falls within JEDEC MO-137 variation AE.

DBQ (R-PDSO-G24)

PLASTIC SMALL OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - D. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.
