25-BIT CONFIGURABLE REGISTERED BUFFER

FEATURES

- **Member of the Texas Instruments Widebus+™ Family**
- **Pinout Optimizes DDR2 DIMM PCB Layout**
- **Configurable as 25-Bit 1:1 or 14-Bit 1:2 Registered Buffer**
- **Chip-Select Inputs Gate the Data Outputs from Changing State and Minimizes System Power Consumption**
- **Output Edge-Control Circuitry Minimizes Switching Noise in an Unterminated Line**
- **Supports SSTL_18 Data Inputs**
- **Differential Clock (CLK and $\overline{\text{CLK}}$) Inputs**
- **Supports LVCMOS Switching Levels on the Control and $\overline{\text{RESET}}$ Inputs**
- **$\overline{\text{RESET}}$ Input Disables Differential Input Receivers, Resets All Registers, and Forces All Outputs Low**

DESCRIPTION

This 25-bit 1:1 or 14-bit 1:2 configurable registered buffer is designed for 1.7-V to 1.9-V VCC operation. In the 1:1 pinout configuration, only one device per DIMM is required to drive nine SDRAM loads. In the 1:2 pinout configuration, two devices per DIMM are required to drive 18 SDRAM loads.

All inputs are SSTL_18, except the reset ($\overline{\text{RESET}}$) and control (Cn) inputs, which are LVCMOS. All outputs are edge-controlled circuits optimized for unterminated DIMM loads and meet SSTL_18 specifications, except the open-drain error ($\overline{\text{QERR}}$) output.

The 74SSTUB32864A operates from a differential clock (CLK and $\overline{\text{CLK}}$). Data are registered at the crossing of CLK going high and CLK going low.

The C0 input controls the pinout configuration of the 1:2 pinout from register-A configuration (when low) to register-B configuration (when high). The C1 input controls the pinout configuration from 25-bit 1:1 (when low) to 14-bit 1:2 (when high). C0 and C1 should not be switched during normal operation. They should be hard-wired to a valid low or high level to configure the register in the desired mode. In the 25-bit 1:1 pinout configuration, the A6, D6, and H6 terminals are driven low and are do-not-use (DNU) pins.

In the DDR2 RDIMM application, $\overline{\text{RESET}}$ is specified to be completely asynchronous with respect to CLK and $\overline{\text{CLK}}$. Therefore, no timing relationship can be ensured between the two. When entering reset, the register is cleared, and the data outputs are driven low quickly, relative to the time required to disable the differential input receivers. However, when coming out of reset, the register becomes active quickly, relative to the time required to enable the differential input receivers. As long as the data inputs are low, and the clock is stable during the time from the low-to-high transition of $\overline{\text{RESET}}$ until the input receivers are fully enabled, the design of the 74SSTUB32864A ensures that the outputs remain low, thus ensuring there will be no glitches on the output.

To ensure defined outputs from the register before a stable clock has been supplied, $\overline{\text{RESET}}$ must be held in the low state during power up.

The device supports low-power standby operation. When $\overline{\text{RESET}}$ is low, the differential input receivers are disabled, and undriven (floating) data, clock, and reference voltage (V_{REF}) inputs are allowed. In addition, when $\overline{\text{RESET}}$ is low, all registers are reset and all outputs are forced low. The LVCMOS $\overline{\text{RESET}}$ and Cn inputs always must be held at a valid logic high or low level.

ORDERING INFORMATION

T_A	PACKAGE(1)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
0°C to 70°C	LFBGA–ZKE	Tape and reel	74SSTUB32864AZKER	SB864A

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

DESCRIPTION (CONTINED)

The device also supports low-power active operation by monitoring both system chip select ($\overline{DCS}$ and $\overline{CSR}$) inputs and gates the Qn outputs from changing states when both $\overline{DCS}$ and $\overline{CSR}$ inputs are high. If either DCS or CSR input is low, the Qn outputs function normally. The $\overline{RESET}$ input has priority over the $\overline{DCS}$ and $\overline{CSR}$ control and, when driven low, forces the Qn outputs low. If the $\overline{DCS}$ control functionality is not desired, the $\overline{CSR}$ input can be hard-wired to ground, in which case the setup-time requirement for $\overline{DCS}$ is the same as for the other D data inputs. To control the low-power mode with $\overline{DCS}$ only, the $\overline{CSR}$ input should be pulled up to V_{CC} through a pullup resistor.

The two V_{REF} pins (A3 and T3) are connected together internally by approximately 150Ω. However, it is necessary to connect only one of the two V_{REF} pins to the external V_{REF} power supply. An unused V_{REF} pin should be terminated with a V_{REF} coupling capacitor.

TERMINAL FUNCTIONS

TERMINAL NAME	DESCRIPTION	ELECTRICAL CHARACTERISTICS
GND	Ground	Ground input
V_{CC}	Power-supply voltage	1.8 V nominal
V_{REF}	Input reference voltage	0.9 V nominal
CLK	Positive master clock input	Differential input
$\overline{CLK}$	Negative master clock input	Differential input
C0, C1	Configuration control input. Register A or Register B and 1:1 mode or 1:2 mode select.	LVCMOS inputs
$\overline{RESET}$	Asynchronous reset input. Resets registers and disables V_{REF}, data, and clock differential-input receivers. When $\overline{RESET}$ is low, all Q outputs are forced low.	LVCMOS input
D1-D25	Data input. Clocked in on the crossing of the rising edge of CLK and the falling edge of $\overline{CLK}$.	SSTL_18 inputs
$\overline{CSR}$, $\overline{DCS}$	Chip select inputs. Disables D1–D25(1) outputs switching when both inputs are high	SSTL_18 inputs
DODT	The outputs of this register bit will not be suspended by the $\overline{DCS}$ and $\overline{CSR}$ control.	SSTL_18 input
DCKE	The outputs of this register bit will not be suspended by the $\overline{DCS}$ and $\overline{CSR}$ control.	SSTL_18 input
Q1–Q25(2)	Data outputs that are suspended by the $\overline{DCS}$ and $\overline{CSR}$ control.	1.8 V CMOS outputs
$\overline{QCS}$	Data output that will not be suspended by the $\overline{DCS}$ and $\overline{CSR}$ control	1.8 V CMOS output
QODT	Data output that will not be suspended by the $\overline{DCS}$ and $\overline{CSR}$ control	1.8 V CMOS output
QCKE	Data output that will not be suspended by the $\overline{DCS}$ and $\overline{CSR}$ control	1.8 V CMOS output
NC	No internal connection	
DNU	Do not use. Inputs are in standby-equivalent mode, and outputs are driven low.	

(1) Data inputs = D2, D3, D5, D6, D8-D25 when C0 = 0 and C1 = 0
Data inputs = D2, D3, D5, D6, D8-D14 when C0 = 0 and C1 = 1
Data inputs = D1-D6, D8-D10, D12, D13 when C0 = 1 and C1 = 1.D
(2) Data outputs = Q2, Q3, Q5, Q6, Q8-Q25 when C0 = 0 and C1 = 0
Data outputs = Q2, Q3, Q5, Q6, Q8-Q14 when C0 = 0 and C1 = 1
Data outputs = Q1-Q6, Q8-Q10, Q12, Q13 when C0 = 1 and C1 = 1.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted) (1)

			VALUE	UNIT
V_{CC}	Supply voltage range		–0.5 to 2.5	V
V_I	Input voltage range (2) (3)		-0.5 to V_{CC} + 0.5	V
V_O	Output voltage range (2) (3)		–0.5 to V_{CC} + 0.5	V
I_{IK}	Input clamp current, (V_I < 0 or V_I > V_{CC})		±50	mA
I_{OK}	Output clamp current, (V_O < 0 or V_O > V_{CC})		±50	mA
I_O	Continuous output current (V_O = 0 to V_{CC})		±50	mA
I_{CCC}	Continuous current through each V_{CC} or GND		±100	mA
$R_{\theta JA}$	Thermal impedance, junction-to-ambiant (4)	No airflow	39.8	K/W
		Airflow 150 ft/min	34.1	
		Airflow 250 ft/min	33.6	
		Airflow 500 ft/min	32.5	
$R_{\theta JB}$	Thermal resistance, junction-to-board (4)	No airflow	14.5	
T_{stg}	Storage temperature range		–65 to 150	°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
(3) This value is limited to 2.5 V maximum.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS (1)

			MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage		1.7		1.9	V
V_{REF}	Reference voltage		0.49 × V_{CC}	0.5 × V_{CC}	0.51 × V_{CC}	V
V_{TT}	Termination voltage		V_{REF}–40 mV	V_{REF}	V_{REF} + 40 mV	V
V_I	Input voltage		0		VCC	V
V_{IH}	AC high-level input voltage	Data inputs, $\overline{CSR}$	V_{REF} + 250 mV			V
V_{IL}	AC low-level input voltage	Data inputs, $\overline{CSR}$			V_{REF}–250 mV	V
V_{IH}	DC high-level input voltage	Data inputs, $\overline{CSR}$	V_{REF} + 125 mV			V
V_{IL}	DC low-level input voltage	Data inputs, $\overline{CSR}$			V_{REF}–125 mV	V
V_{IH}	High-level input voltage	$\overline{RESET}$, C_n	0.65 × V_{CC}			V
V_{IL}	Low-level input voltage	$\overline{RESET}$, C_n			0.35 × V_{CC}	V
V_{ICR}	Common-mode input voltage range	CLK, $\overline{CLK}$	0.675		1.125	V
$V_{I(PP)}$	Peak-to-peak input voltage	CLK, $\overline{CLK}$	600			mV
I_{OH}	High-level output current	Q outputs			–8	mA
I_{OL}	Low-level output current	Q outputs			8	mA
T_A	Operating free-air temperature		0		70	°C

(1) The $\overline{RESET}$ and Cn inputs of the device must be held at valid logic voltage levels (not floating) to ensure proper device operation. The differential inputs must not be floating unless $\overline{RESET}$ is low. See the TI application report, *Implications of Slow or Floating CMOS Inputs* (SCBA004).

ELECTRICAL CHARACTERISTICS

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		V_{CC}	MIN	TYP(1)	MAX	UNIT
V_{OH}	Q outputs	I_{OH} = –100 µA		1.7V to 1.9V	V_{CC}–0.2			V
		I_{OH} = –6 mA		1.7V	1.3			
V_{OL}	Q outputs	I_{OL} = 100 µA		1.7V to 1.9V			0.2	V
		I_{OL} = 6 mA		1.7V			0.4	
I_I	All other inputs(2)	$V_I = V_{CC}$ or GND		1.9V			±5	µA
I_{CC}	Static standby	$\overline{RESET}$ = GND	I_O = 0	1.9V			200	µA
	Static operating	$\overline{RESET} = V_{CC}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$					40	mA
I_{CCD}	Dynamic operating – clock only	$\overline{RESET} = V_{CC}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, CLK and $\overline{CLK}$ switching 50% duty cycle	I_O = 0	1.8V		45		µA/MHz
	Dynamic operating – per each data input, 1:1 configuration	$\overline{RESET} = V_{CC}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, CLK and $\overline{CLK}$ switching 50% duty cycle, one data input switching at one-half clock frequency, 50% duty cycle				43		µA clock MHz/ D input
	Dynamic operating – per each data input, 1:2 configuration					60		
I_{CCDLP}	Chip-select-enabled low-power active mode – clock only	$\overline{RESET} = V_{CC}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, CLK and $\overline{CLK}$ switching 50% duty cycle	I_O = 0	1.8V		45		µA/MHz
	Chip-select-enabled low-power active mode - 1:1 configuration	$\overline{RESET} = V_{CC}$, $V_I = V_{IH(AC)}$ or $V_{IL(AC)}$, CLK and $\overline{CLK}$ switching 50% duty cycle, one data input switching at one-half clock frequency, 50% duty cycle				2		µA clock MHz/ D input
	Chip-select-enabled low-power active mode – 1:2 configuration					3		
C_i	Data inputs, $\overline{CSR}$	$V_I = V_{REF}$± 250 mV		1.8V	2.5	3	3.5	pF
	CLK, $\overline{CLK}$	V_{ICR} = 0.9 V, $V_{I(PP)}$ = 600 mV			2		3	
	$\overline{RESET}$	$V_I = V_{CC}$ or GND				4		

(1) All typical values are at V_{CC} = 1.8 V, T_A = 25°C.
(2) Each V_{REF} pin (A3 or T3) should be tested independently, with the other (untested) pin open.

TIMING REQUIREMENTS

over recommended operating free-air temperature range (unless otherwise noted) (see Figure 2 and (1)

			V_{CC} = 1.8 V ± 0.1 V		UNIT
			MIN	MAX	
fclock	Clock frequency			410	MHz
tw	Pulse duration, CLK, $\overline{CLK}$ high or low		1		ns
tact	Differential inputs active time(2)			10	ns
tinact	Differential inputs inactive time(3)			15	ns
t_{su}	Setup time	$\overline{DCS}$ before CLK↑, $\overline{CLK}$↓, $\overline{CSR}$ high; $\overline{CSR}$ before CLK↑, $\overline{CLK}$↓, $\overline{DCS}$ high	600		ps
		$\overline{DCS}$ before CLK↑, $\overline{CLK}$↓, $\overline{CSR}$ low	500		
		DODT, DCKE, and Data before CLK↑, $\overline{CLK}$↓	500		
t_h	Hold time	$\overline{DCS}$, DODT, DCKE, and Data after CLK↑, $\overline{CLK}$↓	400		ps

(1) All inputs slew rate is 1 V/ns ± 20%.
(2) V_{REF} must be held at a valid input level, and data inputs must be held low for a minimum time of t_{act} max, after $\overline{RESET}$ is taken high.
(3) V_{REF}, data, and clock inputs must be held at valid voltage levels (not floating) for a minimum time of t_{inact} max, after $\overline{RESET}$ is taken low.

SWITCHING CHARACTERISTICS

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		FROM (INPUT)	TO (OUTPUT)	V_{CC} = 1.8 V ± 0.1 V		UNIT
				MIN	MAX	
f_{max}	See Figure 2			410		MHz
t_{pdm}	Production test, See Figure 1	CLK and $\overline{CLK}$	Q	0.4	0.7	ns
t_{RPHL} (1)	See Figure 2	$\overline{RESET}$	Q		3	ns

(1) Includes 350-ps test-load transmission-line delay.

OUTPUT SLEW RATES

over recommended operating free-air temperature range (unless otherwise noted) (see Figure 2)

PARAMETER	FROM	TO	V_{CC} = 1.8 V ± 0.1 V		UNIT
			MIN	MAX	
dV/dt_r	20%	80%	1	4	V/ns
dV/dt_f	80%	20%	1	4	V/ns
dV/dt_Δ(1)	20% or 80%	80% or 20%		1	V/ns

(1) Difference between dV/dt_r (rising edge rate) and dV/dt_f (falling edge rate).

PARAMETER MEASUREMENT INFORMATION

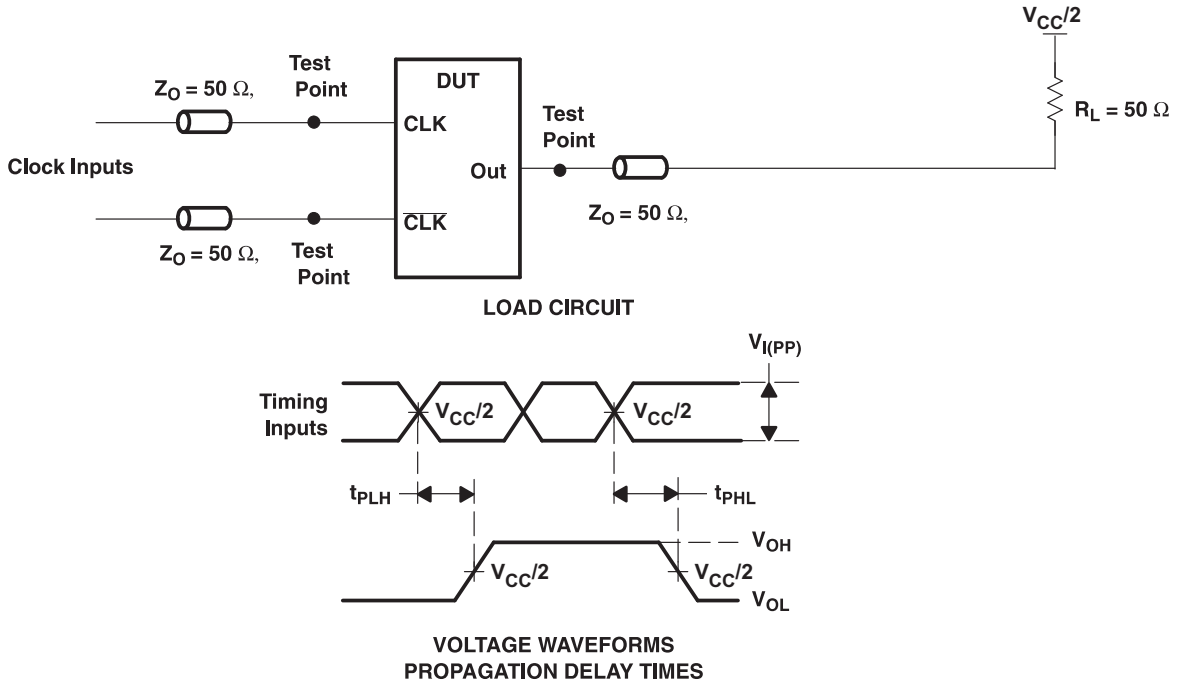

Figure 1. Output Load For Production Test

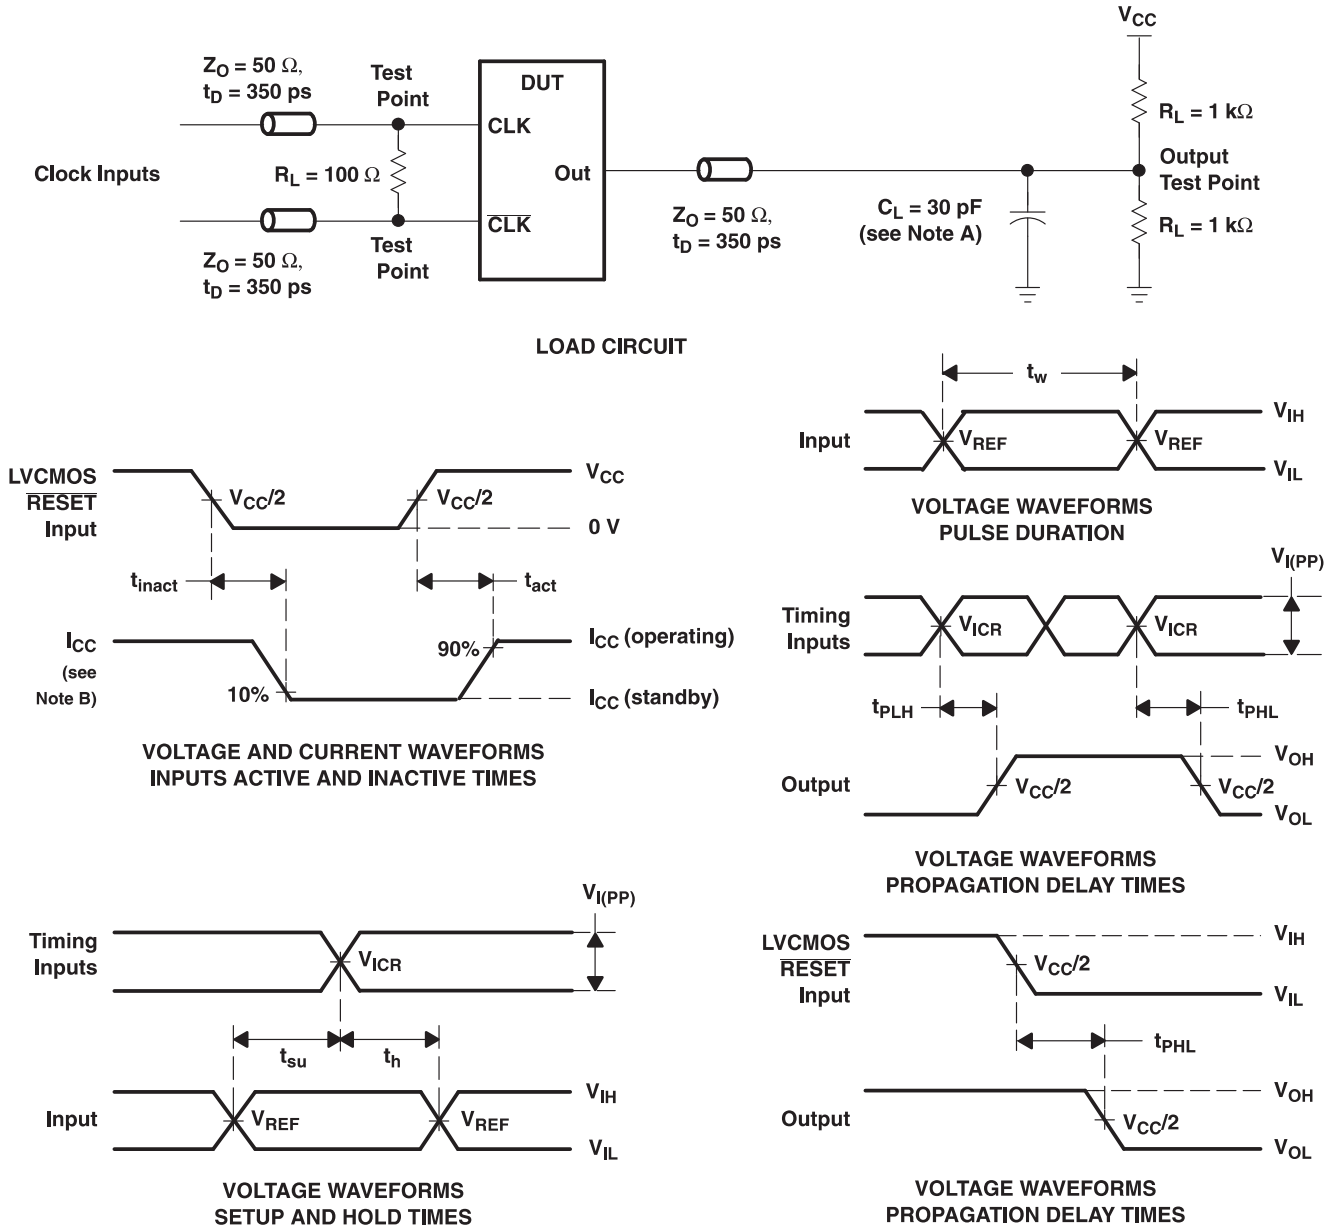
PROPAGATION DELAY (Design Goal as per JEDEC Specification)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	V_{CC} = 1.8 V ± 0.1 V		UNIT
			MIN	MAX	
t_{pdm} (1)	CLK and $\overline{CLK}$	Q	1.1	1.5	ns
t_{pdmss} (1)	CLK and $\overline{CLK}$	Q		1.6	ns

(1) Includes 350 psi test-load transmission delay line



NOTES:
A. C_L includes probe and jig capacitance.
B. I_{CC} tested with clock and data inputs held at V_{CC} or GND, and I_O = 0 mA.
C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, input slew rate = 1 V/ns ±20% (unless otherwise noted).
D. The outputs are measured one at a time, with one transition per measurement.
E. $V_{REF} = V_{TT} = V_{CC}/2$
F. $V_{IH} = V_{REF} + 250$ mV (ac voltage levels) for differential inputs. $V_{IH} = V_{CC}$ for LVCMOS input.
G. $V_{IL} = V_{REF} – 250$ mV (ac voltage levels) for differential inputs. V_{IL} = GND for LVCMOS input.
H. $V_{I(PP)}$ = 600 mV
I. t_{PLH} and t_{PHL} are the same as t_{pd}.

NOTES: A. C_L includes probe and jig capacitance.
B. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, input slew rate = 1 V/ns ± 20% (unless otherwise specified).

Figure 3. Data Output Slew-Rate Measurement Information

APPLICATION INFORMATION

The typical values below are for standard raw cards. Test equipment used was the JEDEC register validation board using pattern 0x43, 0x4F, and 0x5A.

Table 1. Raw Card Values (1)(2)

RAW CARD	t_{pdmss}		OVERSHOOT
	MIN	MAX	
A/F (@ 800 MBit/s)	1.0 ns	1.5 ns	590 mV
B/G (@ 800 MBit/s)	1.2 ns	1.9 ns	590 mV
C/H (@ 800 MBit/s)	1.2 ns	1.9 ns	730 mV
J (@ 667 MBit/s)	1.3 ns	2.0 ns	340 mV

(1) All values are valid under nominal conditions and minimum/maximum of typical signals on one typical DIMM.
(2) Measurements include all jitter and ISI effects.

PACKAGING INFORMATION

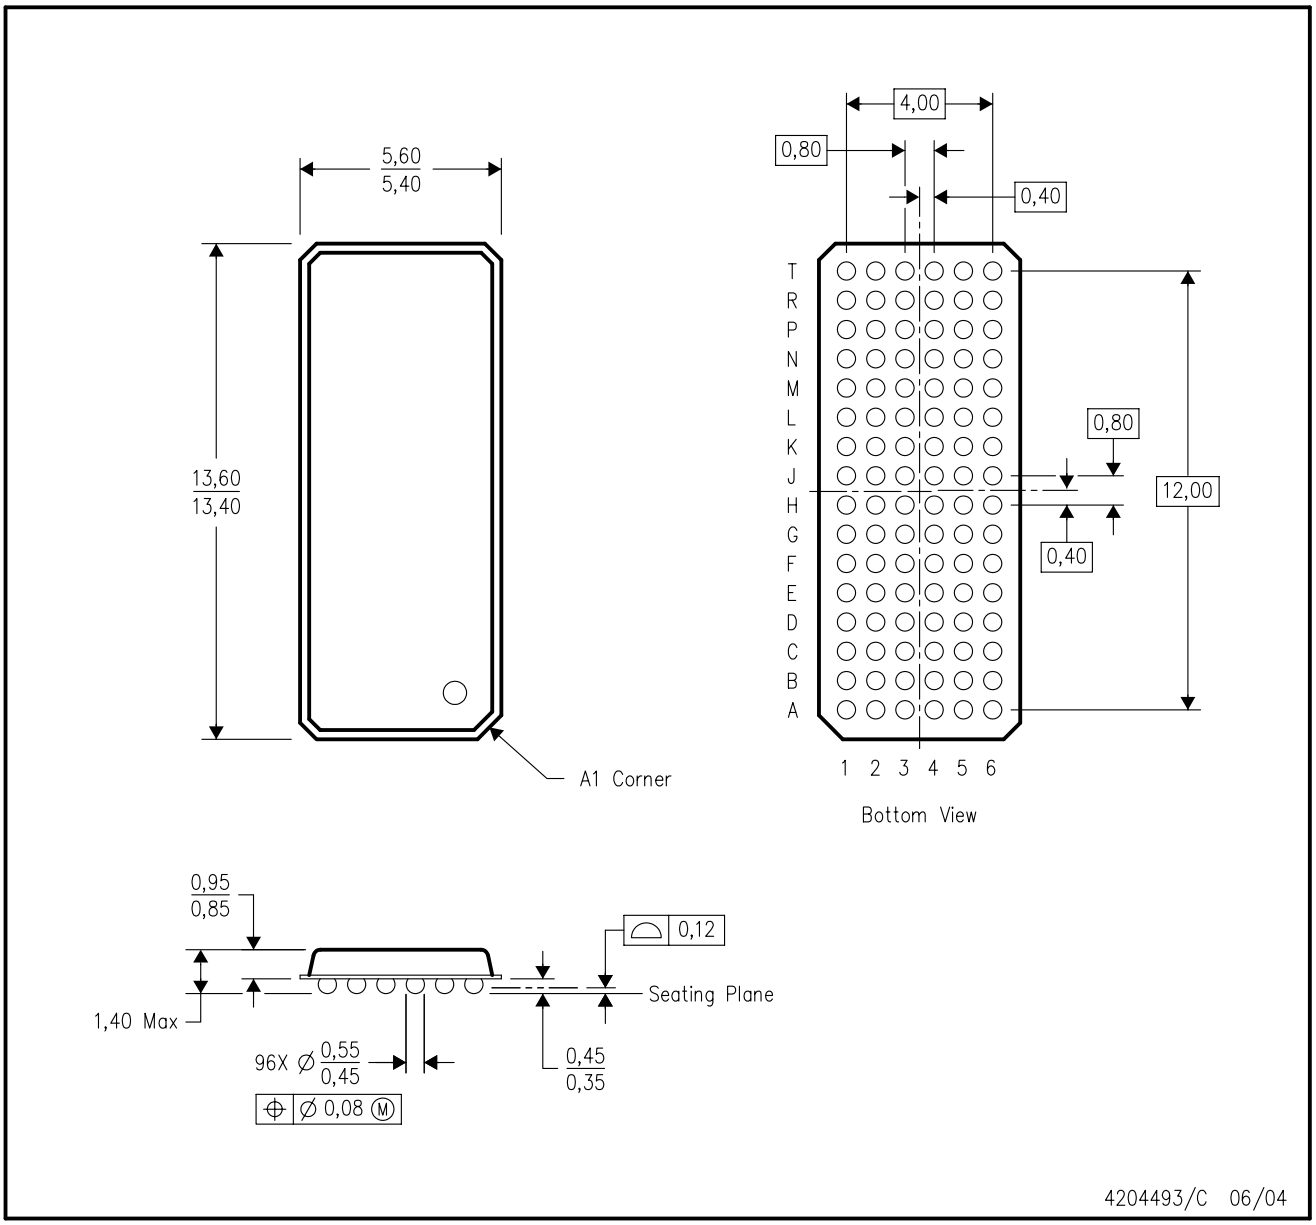
Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)
74SSTUB32864AZKER	ACTIVE	LFBGA	ZKE	96	1000	Green (RoHS & no Sb/Br)	SNAGCU	Level-3-260C-168 HR

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

ZKE (R–PBGA–N96) PLASTIC BALL GRID ARRAY



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Falls within JEDEC MO–205 variation CC.
D. This package is lead–free. Refer to the 96 GKE package (drawing 4188953) for tin–lead (SnPb).

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
