

Low-Power Dual Channel Digital Isolators

 Check for Samples: [ISO7420E](#), [ISO7420FE](#), [ISO7421E](#), [ISO7421FE](#)

FEATURES

- Signaling Rate > 50 Mbps
- For Devices with Suffix F, Output is Low in Default Mode
- Low Power Consumption: Typical I_{CC} per Channel (3.3V Supplies):
 - ISO7420: 1.4 mA at 1 Mbps, 2.5 mA at 25 Mbps
 - ISO7421: 1.8 mA at 1 Mbps, 2.8 mA at 25 Mbps
- Low Propagation Delay: 7 ns Typical (E-Grade)
- Low Pulse Skew: 200 ps Typical (E-Grade)
- Wide T_A Range Specified: -40°C to 125°C
- 50 KV/ μs Transient Immunity, Typical
- Isolation Barrier Life: > 25 Years
- Operates from 3V to 5.5V Supply Levels
- Narrow Body SOIC-8 Package

APPLICATIONS

- Opto-Coupler Replacement in:
 - Industrial FieldBus
 - ProfiBus
 - ModBus
 - DeviceNet™ Data Buses
- Servo Control Interface
- Motor Control
- Power Supplies
- Battery Packs

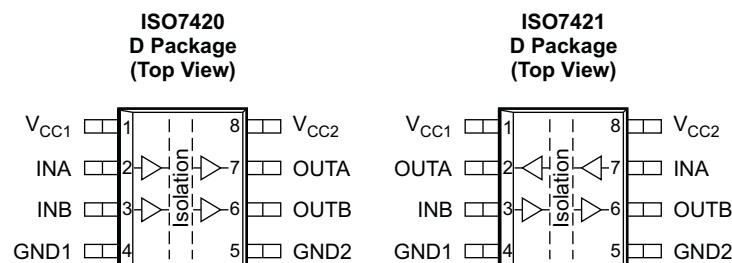

SAFETY AND REGULATORY APPROVALS

- 3000 V_{RMS} / 4242 V_{PK} Isolation per DIN EN 60747-5-2 (VDE 0884 Part 2)
- 2.5 KV_{RMS} Isolation for 1 minute per UL 1577
- CSA Component Acceptance Notice #5A
- IEC 60950-1 and IEC 61010-1 End Equipment Standards
- All Agencies Approvals Completed

DESCRIPTION

ISO7420x and ISO7421x provide galvanic isolation up to 2500 V_{RMS} for 1 minute per UL and 4242 V_{PK} per VDE. These devices have two isolated channels. Each channel has a logic input and output buffer separated by a silicon dioxide (SiO_2) insulation barrier. Used in conjunction with isolated power supplies, these devices prevent noise currents on a data bus or other circuit from entering the local ground and interfering with or damaging sensitive circuitry. The suffix F indicates low-output option in fail-safe conditions (see [Table 1](#)). E-grade devices have no integrated noise filter and thus have fast propagation delays. CC-grade devices have integrated 10ns-filters for harsh environments where short noise pulses may be present at the device input pins.

These devices have TTL input thresholds and operate from 3V to 5.5V supplies. All inputs are 5V tolerant when supplied from a 3.3V supply.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

DeviceNet is a trademark of Texas Instruments.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

PARAMETER MEASUREMENT INFORMATION

- (1) The input pulse is supplied by a generator having the following characteristics: PRR ≤ 50 kHz, 50% duty cycle, $t_r \leq 3$ ns, $t_f \leq 3$ ns, $Z_o = 50 \Omega$. At the input, a 50- Ω resistor is required to terminate the Input Generator signal. It is not needed in an actual application.

NOTE

Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance.

Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

LIFE EXPECTANCY vs WORKING VOLTAGE

IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier, potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_S	Safety input, output, or supply current	$\theta_{JA} = 212^\circ\text{C/W}$, $V_I = 5.5\text{ V}$, $T_J = 150^\circ\text{C}$, $T_A = 25^\circ\text{C}$			107	mA
		$\theta_{JA} = 212^\circ\text{C/W}$, $V_I = 3.6\text{ V}$, $T_J = 150^\circ\text{C}$, $T_A = 25^\circ\text{C}$			164	
T_S	Maximum case temperature				150	$^\circ\text{C}$

The safety-limiting constraint is the absolute-maximum junction temperature specified in the *Absolute Maximum Ratings* table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the *Thermal Characteristics* table is that of a device installed in the JESD51-3, Low-Effective-Thermal-Conductivity Test Board for Leaded Surface-Mount Packages and is conservative. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

REVISION HISTORY

Changes from Original (December 2010) to Revision A **Page**

- Changed the Max values for Supply current for V_{CC1} and V_{CC2} , $C_L = 15\text{pF}$ 7

Changes from Revision A (December 2010) to Revision B **Page**

- Changed Feature bullet From: ISO7421: TBDmA at 1Mbps, TBDmA at 25Mbps To: ISO7421: 1.8mA at 1Mbps, 2.8mA at 25Mbps 1
- Updated the ISO7421x Supply Current values for V_{CC1} and $V_{CC2} = 5\text{V}$ 4
- Updated the ISO7421x Supply Current values for $V_{CC1} = 5\text{V}$ and $V_{CC2} = 3.3\text{V}$ 5
- Updated the ISO7421x Supply Current values for $V_{CC1} = 3.3\text{V}$ and $V_{CC2} = 5\text{V}$ 6
- Updated the ISO7421x Supply Current values for V_{CC1} and $V_{CC2} = 3.3\text{V}$ 7

Changes from Revision B (January 2011) to Revision C **Page**

- Added devices ISO7420FCC and ISO7421FCC 1
- Changed Feature bullet To: Low Propagation Delay: 7 ns Typical (E-Grade) 1
- Changed Feature bullet To: Low Pulse Skew: 200 Typical (E-Grade) 1
- Changed the SAFETY and REGULATORY APPROVALS list 1
- Changed the data sheet DESCRIPTION 1
- Changed PU to X in the last row of the FUNCTION TABLE 2
- Changed the Available Options Table 2
- Changed the Supply Current values for ISO7421x at 10, 25, and 50 Mbps 4
- Added CC-grade and valued to t_{PLH} , t_{PHL} in the Switching Characteristics table 4
- Added ISO7421x values for Pulse width distortion, Channel-to-channel output skew time, and Part-to-part skew time 4
- Changed the Supply Current values for ISO7421x at 10, 25, and 50 Mbps 5
- Added CC-grade and valued to t_{PLH} , t_{PHL} in the Switching Characteristics table 5
- Added ISO7421x values for Pulse width distortion and Channel-to-channel output skew time 5
- Changed the Supply Current values for ISO7421x at 10, 25, and 50 Mbps 6
- Added CC-grade and valued to t_{PLH} , t_{PHL} in the Switching Characteristics table 6
- Changed the Supply Current values for ISO7421x 25 and 50 Mbps 7
- Added CC-grade and valued to t_{PLH} , t_{PHL} in the Switching Characteristics table 7
- Changed Note 1 [Figure 1](#) 8
- Changed [Figure 2](#) 8
- Changed Isolation resistance test conditions 9
- Changed the values of V_{IORM} and V_{PR} in the INSULATION CHARACTERISTICS table 9
- Changed the value of V_{IOTM} in the INSULATION CHARACTERISTICS table From: 4000 To: 4242 9
- Changed [Figure 5](#) 11
- Added section: SUPPLY CURRENT EQUATIONS 12
- Added graphs [Figure 12](#), [Figure 13](#), [Figure 14](#), and [Figure 15](#) 14
- Added graphs [Figure 21](#) and [Figure 22](#) 16

Changes from Revision C (March 2011) to Revision D

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
