# 1 PRODUCT OVERVIEW

## 1.1 Features

- **USB 3.0 Compliant Hub, TID# 330000037**
  - **Upstream Port Supports SuperSpeed USB, High-Speed and Full-Speed Connections**
  - **Supports Four Downstream Ports**
  - **Each of the Four Downstream Ports Support SuperSpeed USB, High-Speed, Full-Speed or Low-Speed Connections**
- **USB 2.0 Hub Features**
  - **Multi Transaction Translator (MTT) Hub: Four Transaction Translators, One Per Port**
  - **Four Asynchronous Endpoint Buffers Per Transaction Translator (TT) for Better Throughput Than the USB Required Minimum of Two Buffers Per TT**
- **Supports Battery Charging Applications**
  - **Battery Charging 1.2 Compliant Charging Downstream Port (CDP) when Upstream Port is Connected**
  - **Battery Charging 1.2 and Chinese Telecommunications Industry Standard YD/T 1591-2009 Compliant Dedicated Charging Port (DCP) when Upstream Port is Disconnected**
- **Supports Operation as a USB 3.0 or USB 2.0 Compound Device**
- **Supports Per Port or Ganged Power Switching and Over-Current Notification Inputs**
- **Provides the following status outputs:**
  - **High-Speed Upstream Connection**
  - **High-Speed Upstream Port Suspended**
  - **SuperSpeed USB Upstream Connection**
  - **SuperSpeed USB Upstream Port Suspended**
- **Optional Serial EEPROM or SMBus Slave Interface for Custom Configurations:**
  - **VID or PID**
  - **Manufacturer and Product Strings**
  - **Serial Number**
- **Using Pin Selection or EEPROM and SMBus Slave Interface, Each Downstream Port Can Be Independently:**
  - **Enabled or Disabled**
  - **Marked as Removable or Permanently Attached (for Compound Applications)**
  - **Have Battery Charging Enabled or Disabled**
- **Provides 128-Bit Universally Unique Identifier (UUID)**
- **Optionally Supports USB 2.0 Compliant Port Indicator LEDs**
- **Configurable SMBus Address to Support Multiple Devices on the Same SMBus Segment**
- **Supports On-Board and In-System EEPROM Programming Via the USB 2.0 Upstream Port**
- **Single Clock Input, 24-MHz Crystal or Oscillator**

## 1.2 Applications

- **Computer Systems**
- **Docking Stations**
- **Monitors**
- **Set-top Boxes**

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## 1.3 Introduction

The TUSB8040A1 is a four-port USB 3.0 compliant hub and is available in a 100-pin QFN package. The device is designed for operation over the commercial temperature range of 0°C to 70°C.

The TUSB8040A1 provides simultaneous SuperSpeed USB and high-speed or full-speed connections on the upstream port and provides SuperSpeed USB, high-speed, full-speed, or low-speed connections on the downstream ports. When the upstream port is connected to an electrical environment that only supports high-speed, full-speed or low-speed connections, SuperSpeed USB connectivity is disabled on the downstream ports. When the upstream port is connected to an electrical environment that only supports full-speed or low-speed connections, SuperSpeed USB and high-speed connectivity are disabled on the downstream ports.

The TUSB8040A1 supports up to four downstream ports. It may be configured to report one to four downstream ports by pin selection or by an attached EEPROM or SMBus controller. The configuration options provide the ability to scale the device by application.

A typical system view of the TUSB8040A1 is shown in Figure 1-1.

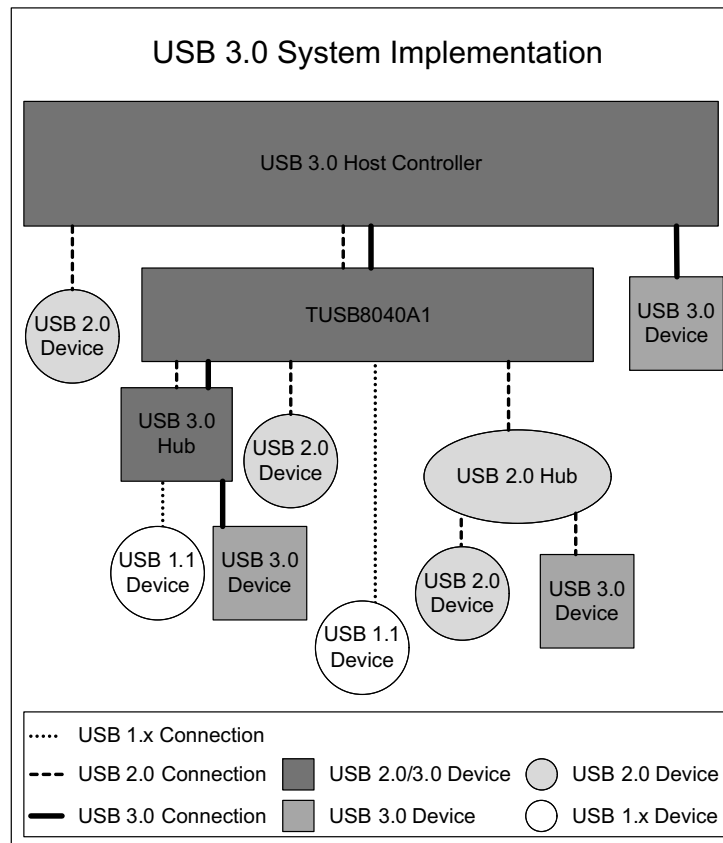

**Figure 1-1. Typical Application**

## 1.4 Functional Description

The TUSB8040A1 supports per port or ganged power switching and over-current protection.

An individually port power controlled hub switches power on or off to each downstream port as requested by the USB host. Also when an individually port power controlled hub senses an over-current event, only power to the affected downstream port will be switched off.

A ganged hub switches on power to all its downstream ports when power is required to be on for any port. The power to the downstream ports is not switched off unless all ports are in a state that allows power to be removed. Also when a ganged hub senses an over-current event, power to all downstream ports will be switched off.

The TUSB8040A1 also provides customization using an I2C EEPROM or configuration via an SMBus host for vendor specific PID, VID, and strings. For the TUSB8040A1 ports can also be marked as disabled or permanently attached using pin selection, I2C EEPROM or an SMBus host. The Device Status and Command Register at F8h cannot be modified by the contents of the I2C EEPROM.

## 2.1 Signal Descriptions

### Table 2-1. Signal Descriptions

| TYPE | DESCRIPTION |
|------|-------------|
| I | Input |
| O | Output |
| I/O | Input/output |
| PD, PU | Internal pull-down/pull-up |
| PT | Passive pass through |
| P | Power Supply |
| G | Ground |

## 2.2 Clock and Reset Signals

### Table 2-2. Clock and Reset Signals

| SIGNAL NAME | TYPE | PIN NO. | DESCRIPTION |
|-------------|------|---------|-------------|
| GRSTz | I, PU | A18 | Global power reset. This reset brings all of the TUSB8040A1 internal registers to their default states. When GRSTz is asserted, the device is completely nonfunctional. GRSTz should be asserted a minimum of 3 ms after all power rails are valid at the device. |
| XI | I | A49 | Crystal input. This terminal is the crystal input for the internal oscillator. The input may alternately be driven by the output of an external oscillator. When using a crystal a 1-MΩ feedback resistor is required between XI and XO. |
| XO | O | A48 | Crystal output. This terminal is crystal output for the internal oscillator. If XI is driven by an external oscillator this pin may be left unconnected. When using a crystal a 1-MΩ feedback resistor is required between XI and XO. |
| VSSOSC | I | B45 | Oscillator return. If using a crystal, the load capacitors should use this signal as the return path and it should not be connected to the PCB ground. If using an oscillator, this terminal should be connected to PCB Ground. |

## 2.3 USB Upstream Signals

### Table 2-3. USB Upstream Signals

| SIGNAL NAME | TYPE | PIN NO. | DESCRIPTION |
|-------------|------|---------|-------------|
| USB_SSTXP_UP | O | B39 | USB SuperSpeed transmitter differential pair (positive) |
| USB_SSTXM_UP | O | A42 | USB SuperSpeed transmitter differential pair (negative) |
| USB_SSRXP_UP | I | A44 | USB SuperSpeed receiver differential pair (positive) |
| USB_SSRXM_UP | I | B40 | USB SuperSpeed receiver differential pair (negative) |
| USB_DP_UP | I/O | A46 | USB high-speed differential transceiver (positive) |
| USB_DM_UP | I/O | B42 | USB high-speed differential transceiver (negative) |
| USB_R1 | PT | A50 | Precision resistor reference. A 9.09-kΩ ±1% resistor should be connected between USB_R1 and USB_R1RTN. |
| USB_R1RTN | PT | B47 | Precision resistor reference return |
| USB_VBUS | I | B44 | USB upstream port power monitor. The VBUS detection requires a voltage divider. The signal USB_VBUS must be connected to VBUS through a 90.9-kΩ ±1% resistor, and to ground through a 10-kΩ ±1% resistor from the signal to ground. |

## 2.4 USB Downstream Signals

### Table 2-4. USB Downstream Signals

| SIGNAL NAME | TYPE | PIN NO. | DESCRIPTION |
|---|---|---|---|
| USB_SSTXP_DN0 | O | B4 | USB SuperSpeed transmitter differential pair (positive) |
| USB_SSTXM_DN0 | O | A4 | USB SuperSpeed transmitter differential pair (negative) |
| USB_SSRXP_DN0 | I | B3 | USB SuperSpeed receiver differential pair (positive) |
| USB_SSRXM_DN0 | I | A3 | USB SuperSpeed receiver differential pair (negative) |
| USB_DP_DN0 | I/O | B1 | USB high-speed differential transceiver (positive) |
| USB_DM_DN0 | I/O | A1 | USB high-speed differential transceiver (negative) |
| PWRON0z_BATEN0 | I/O, PD | B19 | USB Port 0 Power On Control for Downstream Power/Battery Charging Enable. The terminal is used for control of the downstream power switch; in addition, the value of the terminal is sampled at the de-assertion of reset to determine the value of the battery charger support for the port as indicated in the Battery Charger Support register:<br><br>0 = Battery charging not supported<br><br>1 = Battery charging supported<br><br>This terminal provides the port power control for all downstream ports if GANGED_SMBA2 = 1. This terminal also determines the battery charging support of all downstream ports if GANGED_SMBA2 = 1. |
| OVERCUR0z | I, PU | B21 | USB Port 0 over-current detection.<br><br>0 = An overcurrent event has occurred<br><br>1 = An overcurrent event has not occurred<br><br>This terminal should be pulled high using a 10-kΩ resistor if power management is not implemented. If power management is enabled, the external circuitry needed should be determined by the power switch. |
| USB_SSTXP_DN1 | O | B34 | USB SuperSpeed transmitter differential pair (positive) |
| USB_SSTXM_DN1 | O | A37 | USB SuperSpeed transmitter differential pair (negative) |
| USB_SSRXP_DN1 | I | B33 | USB SuperSpeed receiver differential pair (positive) |
| USB_SSRXM_DN1 | I | A36 | USB SuperSpeed receiver differential pair (negative) |
| USB_DP_DN1 | I/O | B36 | USB High-speed differential transceiver (positive) |
| USB_DM_DN1 | I/O | A39 | USB High-speed differential transceiver (negative) |
| PWRON1z_BATEN1 | I/O, PD | A21 | USB Port 1 Power On Control for Downstream Power/Battery Charging Enable. The terminal is used for control of the downstream power switch for Port 1. In addition, the value of the terminal is sampled at the de-assertion of reset to determine the value of the battery charger support for Port 1 as indicated in the Battery Charger Support register:<br><br>0 = Battery Charging Not Supported<br><br>1 = Battery Charging Supported |
| OVERCUR1z | I, PU | A23 | USB Downstream Port 1 Over-Current Detection.<br><br>0 = An overcurrent event has occurred<br><br>1 = An overcurrent event has not occurred<br><br>This terminal should be pulled high using a 10-kΩ resistor if power management is not implemented. If power management is enabled, the external circuitry needed should be determined by the power management device. |
| USB_SSTXP_DN2 | O | B7 | USB SuperSpeed transmitter differential pair (positive) |
| USB_SSTXM_DN2 | O | A8 | USB SuperSpeed transmitter differential pair (negative) |
| USB_SSRXP_DN2 | I | B6 | USB SuperSpeed receiver differential pair (positive) |
| USB_SSRXM_DN2 | I | A7 | USB SuperSpeed receiver differential pair (negative) |
| USB_DP_DN2 | I/O | A9 | USB High-speed differential transceiver (positive) |
| USB_DM_DN2 | I/O | B9 | USB High-speed differential transceiver (negative) |

## Table 2-4. USB Downstream Signals (continued)

| SIGNAL NAME | TYPE | PIN NO. | DESCRIPTION |
|---|---|---|---|
| PWRON2z_BATEN2 | I/O, PD | B20 | USB Port 2 Power On Control for Downstream Power/Battery Charging Enable. The terminal is used for control of the downstream power switch for Port 2. In addition, the value of the terminal is sampled at the de-assertion of reset to determine the value of the battery charger support for Port 2 as indicated in the Battery Charger Support register:<br><br>0 = Battery Charging Not Supported<br><br>1 = Battery Charging Supported |
| OVERCUR2z | I, PU | B22 | USB Downstream Port 2 Over-Current Detection.<br><br>0 = An overcurrent event has occurred<br><br>1 = An overcurrent event has not occurred<br><br>This terminal should be pulled high using a 10-kΩ resistor if power management is not implemented. ## 2.5   I²C/SMBUS Signals

**Table 2-5. I²C/SMBUS Signals**

| SIGNAL NAME | TYPE | PIN NO. | DESCRIPTION |
|---|---|---|---|
| SCL/SMBCLK | I/O, PD | B17 | I²C clock/SMBus clock. Function of terminal depends on the setting of the SMBUSz input.<br><br>When SMBUSz = 1, this terminal acts as the serial clock interface for an I²C EEPROM.<br><br>When SMBUSz = 0, this terminal acts as the serial clock interface for an SMBus host.<br><br>The SCL_SMBCLK terminal is sampled at the deassertion of reset to determine if SuperSpeed USB low power states U1 and U2 are initiated. If SCL_SMBCLK is low, (default), U1 / U2 power states are enabled.<br><br>If SCL_SMBCLK is high, entry to U1 / U2 power states is not initiated by the hub downstream ports, but is accepted. This input is over-ridden if SDA_SMBDAT is sampled as a '1'. If an EEPROM is installed, U1/U2 power state support is controlled by the Device Configuration Register.<br><br>Can be left unconnected if external interface not implemented. |
| SDA/SMBDAT | I/O, PD | A19 | I²C data/SMBus data. Function of terminal depends on the setting of the SMBUSz input.<br><br>When SMBUSz = 1, this terminal acts as the serial data interface for an I²C EEPROM.<br><br>When SMBUSz = 0, this terminal acts as the serial data interface for an SMBus host.<br><br>The SDA_SMBDAT terminal is sampled at the deassertion of reset to determine if SuperSpeed USB low power states U1 and U2 are disabled. If SDA_SMBDAT is high, U1 and U2 low power states are disabled. If SDA_SMBDAT is low, U1 and U2 low power states are enabled.<br><br>If the optional EEPROM or SMBUS is implemented, the value of the u1u2Disable bit of the Device Configuration Register determines if the low power states U1 and U2 are enabled.<br><br>Can be left unconnected if external interface not implemented and U1 and U2 are to be enabled. |
| SMBUSz | I, PU | B18 | I²C/SMBus mode select.<br><br>1 = I²C Mode Selected<br><br>0 = SMBus Mode Selected<br><br>Can be left unconnected if external interface not implemented. |

## 2.6 Test and Miscellaneous Signals

### Table 2-6. Test and Miscellaneous Signals

| SIGNAL NAME | TYPE | PIN NO. | DESCRIPTION |
|---|---|---|---|
| JTAG_TCK | I/O, PD | B13 | JTAG test clock. Can be left unconnected. |
| JTAG_TDI | I/O, PU | B15 | JTAG test data in. Can be left unconnected. |
| JTAG_TDO | I/O, PD | A15 | JTAG test data out. Can be left unconnected. |
| JTAG_TMS | I/O, PU | B14 | JTAG test mode select. Can be left unconnected. |
| JTAG_RSTz | I/O, PD | A16 | JTAG reset. Pull down using an external 1-kΩ resistor for normal operation. |
| HS_SUSPEND | I/O, PD | B11 | High-speed suspend status output.<br><br>0 = High-speed upstream port not suspended<br><br>1= High-speed upstream port suspended<br><br>The value of the terminal is sampled at the deassertion of reset to determine the polarity of the PWRONxz_BATENx pins. If it is sampled as a '0' (default), the polarity is active low. If it is sampled as a '1', the polarity is active high.<br><br>Can be left unconnected. |
| SS_SUSPEND | I/O, PD | A13 | SuperSpeed USB suspend status output.<br><br>0 = SuperSpeed USB upstream port not suspended<br><br>1= SuperSpeed USB upstream port suspended<br><br>The value of the terminal is sampled at the deassertion of reset to determine if spread spectrum clocking is enabled or disabled. If it is sampled as a '0' (default), SSC is enabled. If it is sampled as a '1', SSC is disabled.<br><br>Can be left unconnected. |
| HS | O, PU | A11 | High-speed status. The terminal is to indicate the connection status of the upstream port as documented below:<br><br>0 = Hub in low/full speed mode<br><br>1 = Hub in high-speed mode<br><br>Can be left unconnected. |
| SS | O, PU | A12 | SuperSpeed USB status. The terminal is to indicate the connection status of the upstream port as documented below:<br><br>0 = Hub not in SuperSpeed USB mode<br><br>1 = Hub in SuperSpeed USB mode<br><br>Can be left unconnected. |
| FULLPWRMGMTz_SMBA1 | I, PU | A17 | Full power management enable/SMBus address bit 1.<br><br>The value of the terminal is sampled at the de-assertion of reset to set the power switch control follows:<br><br>0 = Full power management supported<br><br>1 = Full Power management not supported<br><br>Full power management is the ability to control power to the downstream ports of the TUSB8040A1 using the PWRON0z_BATEN0 terminal. When SMBus mode is enabled using SMBUSz, this terminal sets the value of the SMBus slave address bit 1. SMBus slave address bits 2 and 3 are always 1 for the TUSB8040A1. When SMBus mode is enabled using SMBUSz, this terminal sets the value of the SMBus slave address bit 1.<br><br>Can be left unconnected if full power management and SMBus are not implemented. |
| GANGED_SMBA2 | I, PU | A41 | Ganged operation enable/SMBus Address bit 2.<br><br>The value of the terminal is sampled at the deassertion of reset to set the power switch and over current detection mode as follows:<br><br>0 = Power indicator LEDs are enabled<br><br>1 = Power indicator LEDs are NOT enabled<br><br>When SMBus mode is enabled using SMBUSz, this terminal sets the value of the SMBus slave address bit 3. |

**Table 2-6. Test and Miscellaneous Signals (continued)**

| SIGNAL NAME | TYPE | PIN NO. | DESCRIPTION |
|---|---|---|---|
| PORTINDz_SMBA3 | I, PU | B37 | Port Indicator LED Status/SMBus Address bit 3.<br>The value of the terminal is sampled at the deassertion of reset to determine the port indicator support for the hub as follows:<br>   0 = Port Indicator LEDs are enabled<br>   1 = Port Indicator LEDs are not enabled<br>When SMBus mode is enabled using SMBUSz, this terminal sets the value of the SMBus slave address bit 3. |

| D0-F7h | Reserved |
| F8h | Device Status and Command Register |
| F9-FFh | Reserved |

## 3.2 I$_2$C EEPROM Operation

The TUSB8040A1 supports a single-master, standard mode (100 kbit/s) connection to a dedicated I$^2$C EEPROM when the I$^2$C interface mode is enabled. In I$^2$C mode, the TUSB8040A1 reads the contents of the EEPROM at bus address 1010000b using 7-bit addressing starting at address 0. If the value of the EEPROM contents at byte 00h equals 55h, the TUSB8040A1 loads the configuration registers according to the EEPROM map. If the first byte is not 55h, the TUSB8040A1 exits the I$^2$C mode and continues execution with the default values in the configuration registers. The hub will not connect on the upstream port until the configuration is completed.

Note, some bytes located below offset 9h are optional. Please refer to the detailed register descritpions for any requirements on EEPROM configuration of registers.

For details on I$^2$C operation refer to the UM10204 I$^2$C-bus Specification and User Manual.

## 3.3 SMBus Slave Operation

When the SMBus interface mode is enabled, the TUSB8040A1 supports read block and write block protocols as a slave-only SMBus device.

The TUSB8040A1RKM slave address is 1000 pgxy, where:

- p is the state of PORTINDz_SMBA3 at reset,
- g is the state of GANGED_SMBA2 at reset,
- x is the state of FULLPWRMGMTz_SMBA1 at reset, and
- y indicates read (logic 1) or write (logic 0) access.

If the TUSB8040A1 is addressed by a host using an unsupported protocol it will not respond. The TUSB8040A1 will wait indefinitely for configuration by the SMBus host and will not connect on the upstream port until the SMBus host indicates configuration is complete by clearing the CFG_ACTIVE bit.

For details on SMBus requirements refer to the System Management Bus Specification.

## 3.4 Configuration Registers

The internal configuration registers are accessed on byte boundaries. The configuration register values are loaded with defaults but can be over-written when the TUSB8040A1 is in $I^2C$ or SMBus mode.

### 3.4.1 ROM Signature Register

**Table 3-2. Register Offset 0h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-3. Bit Descriptions – ROM Signature Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | romSignature | RW | ROM Signature Register. This register is used by the TUSB8040A1 in $I^2C$ mode to validate the attached EEPROM has been programmed. The first byte of the EEPROM is compared to the mask 55h and if not a match, the TUSB8040A1 aborts the EEPROM load and executes with the register defaults. |

### 3.4.2 Vendor ID LSB Register

**Table 3-4. Register Offset 1h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 1 | 0 | 1 | 0 | 0 | 0 | 1 |

**Table 3-5. Bit Descriptions – Vendor ID LSB Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | vendorIdLsb | RW | Vendor ID LSB. Least significant byte of the unique vendor ID assigned by the USB-IF; the default value of this register is 51h representing the LSB of the TI Vendor ID 0451h. The value may be over-written to indicate a customer Vendor ID. |

### 3.4.3 Vendor ID MSB Register

**Table 3-6. Register Offset 2h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 |

**Table 3-7. Bit Descriptions – Vendor ID MSB Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | vendorIdMsb | RW | Vendor ID MSB. Most significant byte of the unique vendor ID assigned by the USB-IF; the default value of this register is 04h representing the MSB of the TI Vendor ID 0451h. The value may be over-written to indicate a customer Vendor ID. |

### 3.4.4 Product ID LSB Register

**Table 3-8. Register Offset 3h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 1 | 0 | 0 | 0 | 1 | 1 | 0 |

**Table 3-9. Bit Descriptions – Vendor ID LSB Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | productIdLsb | RW | Product ID LSB. Least significant byte of the product ID assigned by Texas Instruments; the default value of this register is 46h representing the LSB of the product ID assigned by Texas Instruments. The value of this register will be reported as configured for the SuperSpeed USB Device descriptor. The USB 2.0 Device descriptor will report the value in this register with bit [1] toggled. This ensures that the USB drivers load properly for both hubs. The value may be over-written to indicate a customer product ID. |

### 3.4.5 Product ID MSB Register

**Table 3-10. Register Offset 4h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-11. Bit Descriptions – Vendor ID MSB Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | productIdMsb | RW | Product ID MSB. Most significant byte of the product ID assigned by Texas Instruments; the default value of this register is 80h representing the MSB of the product ID assigned by Texas Instruments. The value may be over-written to indicate a customer product ID. |

### 3.4.6 Device Configuration Register

**Table 3-12. Register Offset 5h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | X | X | X | X | 0 |

**Table 3-13. Bit Descriptions – Device Configuration Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7 | customStrings | RW | Custom Strings Enable. When this bit is set and the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads the string registers from the contents of the EEPROM. When set and the TUSB8040A1 is in SMBUS mode, the string registers may written by an SMBus host. This bit defaults to 0. |
| 6 | customSernum | RW | Custom Serial Number Enable. When this bit is set and the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads the serial number register from the contents of the EEPROM. When set and the TUSB8040A1 is in SMBUS mode, the Serial Number registers may written by an SMBus host. This bit defaults to 0. |
| 5 | u1u2Disable | RW | U1 U2 Disable. When this bit is set the TUSB8040A1 will not initiate or accept any U1 or U2 requests on any port, upstream or downstream, unless it receives or sends a Force_LinkPM_Accept LMP. After receiving or sending an FLPMA LMP, it will continue to enable U1 and U2 according to USB 3.0 protocol until it gets a power-on reset or is disconnected on its upstream port. This bit is loaded at the de-assertion of reset with the value of the SDA_SMBDAT terminal. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the value may be over-written by an SMBus host. |
| 4 | portIndz | RW | Port Indicator Status. This bit shall be loaded at the de-assertion of reset with the value of PORTINDz_SMBA3 terminal. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the value may be overwritten by an SMBus host. |
| 3 | ganged | RW | Ganged. This bit shall be loaded at the de-assertion of reset with the value of GANGEd_SMBA2 terminal. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the value may be overwritten by an SMBus host. |
| 2 | fullPwrMgmtz | RW | Full Power Management. This bit is loaded at the de-assertion of reset with the value of the FULLPWRMGMTz_SMBA1 terminal. When this bit is 0, power switching and over-current detection is supported whether bus- or self-powered. When the bit is 1 and the device is bus powered, power switching is supported but over-current detection is not supported. When the bit is 1 and the device is self-powered over-current detection is supported but power switching is not supported. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the value may be over-written by an SMBus host. |
| 1 | u1u2TimerOvr | RW | U1 U2 Timer Override. When this bit is set the TUSB8040A1 will override the downstream ports u1/u2 timeout values set by software. If software sets a value in the range of 1-FF, the TUSB8040A1 will use the value FF. If software sets a value of 0, the TUSB8040A1 will use the value 0.This bit is loaded at the de-assertion of reset with the value of the SCL_SMBCLK terminal. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the value may be over-written by an SMBus host. |
| 0 | RSVD | RO | Reserved. Read only, returns 0 when read. |

### 3.4.7 Battery Charging Support Register

#### Table 3-14. Register Offset 6h

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | X | X | X | X |

#### Table 3-15. Bit Descriptions – Battery Charging Support Register

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:4 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 3:0 | batEn[3:0] | RW | Battery Charger Support. The bits in this field indicate whether the downstream port implements the charging port features. A value of 0 indicates the port does not implement the charging port features. A value of 1 indicates the port does support the charging port features. Each bit corresponds directly to a downstream port, i.e. batEn0 corresponds to downstream port 0. When in $I^2C$/SMBus mode the bits in this field corresponding to the enabled ports per used[3:0] may be over-written by EEPROM contents or by an SMBus host.<br><br>The default value for these bits are loaded at the de-assertion of reset with the value of the PWRON[3:0]z_BATEN[3:0] as follows:<br>    bateEn[3:0] defaults to wxyzb,<br>where w is PWRON3z_BATEN3, x is PWRON2z_BATEN2, y is PWRON1z_BATEN1 and z is PWRON0z_BATEN0. |

### 3.4.8 Device Removable Configuration Register

#### Table 3-16. Register Offset 7h

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | X | X | X | X |

#### Table 3-17. Bit Descriptions – Device Removable Configuration Register

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:4 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 3:0 | rmbl[3:0] | RW | Removable. The bits in this field indicate whether a device attached to downstream ports 3 through 0 are removable or permanently attached. A value of 0 indicates the device attached to the port is not removable. A value of 1 indicates the device attached to the port is removable.<br><br>The default value for these bits are loaded at the de-assertion of reset with the value of LEDA[3:0]z_RMBL[3:0] as follows:<br>    rmbl[3:0] defaults to wxyzb,<br>where w is LEDA3z_RMBL3, x is LEDA2z_RMBL2, y is LEDA1z_RMBL1 and z is LEDA0z_RMBL0. |

### 3.4.9 Port Used Configuration Register

#### Table 3-18. Register Offset 8h

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | X | X | X | X |

#### Table 3-19. Bit Descriptions – Port Used Configuration Register

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:4 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 3:0 | used[3:0] | RW | Used. The bits in this field indicate whether downstream ports 3 through 0 are enabled or disabled for use. A value of 0 indicates the port is not used. A value of 1 indicates the port is used.<br><br>The default value for these bits are loaded at the de-assertion of reset with the value of LEDG[3:0]z_USED[3:0] as follows:<br><br>used[3:0] defaults to wxyzb,<br><br>where w is LEDG3z_USED3, x is LEDG2z_USED2, y is LEDG1z_USED1 and z is LEDG0z_USED0. |

### 3.4.10 Reserved Register

#### Table 3-20. Register Offset 9h

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

#### Table 3-21. Bit Descriptions – Reserved Register

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:6 | RSVD | RW | Reserved. When the TUSB8040A1 is in I$^2$C mode, the TUSB8040A1 loads these bits from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. These bits shall be programmed to 0 for normal operation. |
| 5:2 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 1:0 | RSVD | RW | Reserved. When the TUSB8040A1 is in I$^2$C mode, the TUSB8040A1 loads these bits from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. These bits shall be programmed to 0 for normal operation. |

### 3.4.11 Reserved Register

**Table 3-22. Register Offset Ah**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 0 |

**Table 3-23. Bit Descriptions – Reserved Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:5 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 4:2 | RSVD | RW | Reserved. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads these bits from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. These bits shall be programmed to 0 for normal operation. |
| 1 | RSVD | RW | Reserved. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads these bits from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. This bit shall be programmed to 1 for normal operation. |
| 0 | RSVD | RO | Reserved. Read only, returns 0 when read. |

### 3.4.12 Language ID LSB Register

**Table 3-24. Register Offset 20h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 1 |

**Table 3-25. Bit Descriptions – Language ID LSB Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | langIdLsb | RW | Language ID least significant byte. This register contains the value returned in the LSB of the LANGID code in string index 0. The TUSB8040A1 only supports one language ID. The default value of this register is 09h representing the LSB of the LangID 0409h indicating English United States. When customStrings is 1, this field may be over-written by the contents of an attached EEPROM or by an SMBus host. |

### 3.4.13 Language ID MSB Register

**Table 3-26. Register Offset 21h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 |

**Table 3-27. Bit Descriptions – Language ID MSB Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | langIdMsb | RW | Language ID most significant byte. This register contains the value returned in the MSB of the LANGID code in string index 0. The TUSB8040A1 only supports one language ID. The default value of this register is 04h representing the MSB of the LangID 0409h indicating English United States. When customStrings is 1, this field may be over-written by the contents of an attached EEPROM or by an SMBus host. |

### 3.4.14 Serial Number String Length Register

**Table 3-28. Register Offset 22h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 1 | 0 | 1 | 0 | 0 |

**Table 3-29. Bit Descriptions – Serial Number String Length Register**

| Bit | Field Name | Access | Description |
|-----|-----------|--------|-------------|
| 7:6 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 5:0 | serNumStringLen | RW | Serial number string length. The string length in bytes for the serial number string. The default value is 14h, indicating that a 20-byte serial number string is supported. The maximum string length is 32 bytes. This field may be over-written by the contents of an attached EEPROM or by an SMBus host. When the field is non-zero, a serial number string of serNumbStringLen bytes is returned at string index 1 from the data contained in the Serial Number String registers. |

### 3.4.15 Manufacturer String Length Register

**Table 3-30. Register Offset 23h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-31. Bit Descriptions – Manufacturer String Length Register**

| Bit | Field Name | Access | Description |
|-----|-----------|--------|-------------|
| 7 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 6:0 | mfgStringLen | RW | Manufacturer string length. The string length in bytes for the manufacturer string. The default value is 0, indicating that a manufacturer string is not provided. The maximum string length is 64 bytes. When the field is non-zero, a manufacturer string of mfgStringLen bytes is returned at string index 3 from the data contained in the Manufacturer String registers. |

### 3.4.16 Product String Length Register

**Table 3-32. Register Offset 24h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-33. Bit Descriptions – Product String Length Register**

| Bit | Field Name | Access | Description |
|-----|-----------|--------|-------------|
| 7 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 6:0 | prodStringLen | RW | Product string length. The string length in bytes for the product string. The default value is 0, indicating that a product string is not provided. The maximum string length is 64 bytes. When the field is non-zero, a product string of prodStringLen bytes is returned at string index 2 from the data contained in the Product String registers. |

### 3.4.17 Reserved Register

**Table 3-34. Register Offset 2Fh**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-35. Bit Descriptions – Reserved Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:1 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 0 | RSVD | RW | Reserved. When the TUSB8040A1 is in I$^2$C mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. This bit shall be programmed to 0 for normal operation. |

### 3.4.18 Serial Number Registers

**Table 3-36. Register Offset 30h-4Fh**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | X | X | x | x | x | x | x | x |

**Table 3-37. Bit Descriptions – Serial Number Registers**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | serialNumber[n] | RW | Serial Number byte N. The serial number returned in the Serial Number string descriptor at string index 1. The default value of these registers is calculated from the Die ID fields in the fuseRom. When customSernum is 1, these registers may be over-written by EEPROM contents or by an SMBus host. The serial number will be returned in USB 2.0 descriptor of the TUSB8040A1. |

### 3.4.19 Manufacturer String Registers

**Table 3-38. Register Offset 50h-8Fh**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-39. Bit Descriptions – Manufacturer String Registers**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | mfgStringByte[n] | RW | Manufacturer string byte N. These registers provide the string values returned for string index 3 when mfgStringLen is greater than 0. The number of bytes returned in the string is equal to mfgStringLen. The programmed data should be in UNICODE UTF-16LE encodings as defined by The Unicode Standard, Worldwide Character Encoding, Version 5.0. |

### 3.4.20 Product String Registers

**Table 3-40. Register Offset 90h-CFh**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-41. Bit Descriptions – Product String Registers**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:0 | prodStringByte[n] | RW | Product string byte N. These registers provide the string values returned for string index 2 when prodStringLen is greater than 0. The number of bytes returned in the string is equal to prodStringLen. The programmed data should be in UNICODE UTF-16LE encodings as defined by The Unicode Standard, Worldwide Character Encoding, Version 5.0. |

### 3.4.21 Additional Feature Configuration Register

**Table 3-42. Register Offset F0h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-43. Bit Descriptions –Additional Feature Configuration Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:1 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 0 | usb3spreadDis | RW | USB 3.0 Spread Spectrum Clocking Disable. When this bit is set USB 3.0 spread spectrum clocking is disabled. This bit is loaded at the de-assertion of reset with the value of the SS_SUSPEND terminal. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the value may be over-written by an SMBus host. This bit shall be programmed to 0 for normal operation. |

### 3.4.22 Reserved Register

**Table 3-44. Register Offset F1h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-45. Bit Descriptions – Reserved Register**

| Bit | Field Name | Access | Description |
|---|---|---|---|
| 7:6 | RSVD | RW | Reserved. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads these bits from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. |
| 5:1 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 0 | RSVD | RW | Reserved. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. This bit shall be programmed to 0 for normal operation. |

### 3.4.23 Reserved Register

**Table 3-46. Register Offset F2h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-47. Bit Descriptions – Reserved Register**

| Bit | Field Name | Access | Description |
|-----|-----------|--------|-------------|
| 7:1 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 0 | RSVD | RW | Reserved. When the TUSB8040A1 is in $I^2C$ mode, the TUSB8040A1 loads this bit from the contents of the EEPROM. When the TUSB8040A1 is in SMBUS mode, the values may be over-written by an SMBus host. This bit shall be programmed to 0 for normal operation. |

### 3.4.24 Device Status and Command Register

**Table 3-48. Register Offset F8h**

| Bit No. | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|---------|---|---|---|---|---|---|---|---|
| Reset State | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

**Table 3-49. Bit Descriptions – Device Status and Command Register**

| Bit | Field Name | Access | Description |
|-----|-----------|--------|-------------|
| 7:2 | RSVD | RO | Reserved. Read only, returns 0 when read. |
| 1 | smbusRst | RSU | SMBus interface reset. This bit resets the SMBus slave interface to its default state and loads the registers back to their GRSTz values. This bit is set by writing a 1 and is cleared by hardware on completion of the reset. A write of 0 has no effect. (Not used with $I^2C$) |
| 0 | cfgActive | RCU | Configuration active. This bit indicates that configuration of the TUSB8040A1 is currently active. The bit is set by hardware when the device enters the $I^2C$ or SMBus mode. The TUSB8040A1 does not connect on the upstream port while this bit is 1.When in $I^2C$ mode, the bit is cleared by hardware when the TUSB8040A1 exits the $I^2C$ mode. When in the SMBus mode, this bit must be cleared by the SMBus host in order to exit the configuration mode and allow the upstream port to connect. The bit is cleared by a writing 1. A write of 0 has no effect. |

# 4 CLOCK GENERATION

The TUSB8040A1 accepts a crystal input to drive an internal oscillator or an external clock source. If a clock is provided to XI instead of a crystal, XO is left open and VSSOSC should be connected to the PCB ground plane. Otherwise, if a crystal is used, the connection needs to follow the guidelines below. Since XI and XO are coupled to other leads and supplies on the PCB, it is important to keep them as short as possible and away from any switching leads. It is also recommended to minimize the capacitance between XI and XO. This can be accomplished by connecting the VSSOSC lead to the two external capacitors CL1 and CL2 and shielding them with the clean ground lines. The VSSOSC should not be connected to PCB ground when using a crystal.

**Figure 4-1. TUSB8040A1 Clock**

## 4.1 Crystal Requirements

The crystal must be fundamental mode with load capacitance of 12 pF to 24 pF and frequency stability rating of ±100 PPM or better. To ensure proper startup oscillation condition, a maximum crystal equivalent series resistance (ESR) of 50 Ω is recommended. A parallel, 18-pF load capacitor should be used if a crystal source is used. VSSOSC should not be connected to the PCB ground plane.

## 4.2 Input Clock Requirements

When using an external clock source such as an oscillator, the reference clock should have a ±100 PPM or better frequency stability and have less than 50-ps absolute peak to peak jitter or less than 25-ps peak to peak jitter after applying the USB 3.0 jitter transfer function. XI should be tied to the 1.8-V clock source and XO should be left floating. VSSOSC should be connected to the PCB ground plane.

# 5    POWER UP AND RESET

The TUSB8040A1 does not have specific power sequencing requirements with respect to the core power (VDD) or I/O and analog power (VDD33). The core power (VDD) or I/O power (VDD33) may be powered up for an indefinite period of time while the other is not powered up if all of these constraints are met:

- All maximum ratings and recommended operating conditions are observed.
- All warnings about exposure to maximum rated and recommended conditions are observed, particularly junction temperature. These apply to power transitions as well as normal operation.
- Bus contention while VDD33 is powered up must be limited to 100 hours over the projected life-time of the device.
- Bus contention while VDD33 is powered down may violate the absolute maximum ratings.

A supply bus is powered up when the voltage is within the recommended operating range. It is powered down when it is below that range, either stable or in transition.

A minimum reset duration of 3 ms is required. This is defined as the time when the power supplies are in the recommended operating range to the de-assertion of GRSTz. This can be generated using programmable-delay supervisory device or using an RC circuit.

A supply bus is powered up when the voltage is within the recommended operating range. It is powered down when it is below that range, either stable or in transition.

A minimum reset duration of 3 ms is required. This is defined as the time when the power supplies are in the recommended operating range to the de-assertion of GRSTz. This can be generated using programmable-delay supervisory device or using an RC circuit.

# 6    ELECTRICAL SPECIFICATIONS

## 6.1    Absolute Maximum Ratings[1]

over operating free-air temperature range (unless otherwise noted)

| | | VALUE | UNIT |
|---|---|---|---|
| $V_{DD33}$ | Supply voltage | -0.3 to 3.8 | V |
| $V_{DD}$ | | -0.3 to 1.4 | |
| $T_{stg}$ | Storage temperature range | -65 to 150 | °C |

(1)    Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Expose to absolute-maximum-rated conditions for extended periods may affect device reliability

## 6.2    Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

| | | MIN | NOM | MAX | UNIT |
|---|---|---|---|---|---|
| $V_{DD33}$ | Supply voltage | 3 | 3.3 | 3.6 | V |
| $V_{DD}$ [1] | | 0.99 | | 1.26 | |
| $T_A$ | Operating free-air temperature range | 0 | 25 | 70 | °C |
| $T_J$ | Operating junction temperature range | 0 | 25 | 105 | °C |

(1)    A 1.05-V, 1.1-V, or 1.2-V supply may be used as long as minimum and maximum supply conditions are met.

## 6.3    THERMAL INFORMATION

| | | TUSB8040A1 | UNITS |
|---|---|---|---|
| | THERMAL METRIC | RKM | |
| | | 100 PINS | |
| $\theta_{JA}$ | Junction-to-ambient thermal resistance[1] | 25.6 | °C/W |
| $\theta_{JCtop}$ | Junction-to-case (top) thermal resistance[2] | 9.5 | |
| $\theta_{JB}$ | Junction-to-board thermal resistance[3] | 15.2 | |
| $\psi_{JT}$ | Junction-to-top characterization parameter[4] | 0.1 | |
| $\psi_{JB}$ | Junction-to-board characterization parameter[5] | 7.5 | |
| $\theta_{JCbot}$ | Junction-to-case (bottom) thermal resistance[6] | 0.4 | |

(1)    The junction-to-ambient thermal resistance under natural convection is obtained in a simulation on a JEDEC-standard, high-K board, as specified in JESD51-7, in an environment described in JESD51-2a.
(2)    The junction-to-case (top) thermal resistance is obtained by simulating a cold plate test on the package top. No specific JEDEC-standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.
(3)    The junction-to-board thermal resistance is obtained by simulating in an environment with a ring cold plate fixture to control the PCB temperature, as described in JESD51-8.
(4)    The junction-to-top characterization parameter, $\psi_{JT}$, estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining $\theta_{JA}$, using a procedure described in JESD51-2a (sections 6 and 7).
(5)    The junction-to-board characterization parameter, $\psi_{JB}$, estimates the junction temperature of a device in a real system and is extracted from the simulation data for obtaining $\theta_{JA}$ , using a procedure described in JESD51-2a (sections 6 and 7).
(6)    The junction-to-case (bottom) thermal resistance is obtained by simulating a cold plate test on the exposed (power) pad. No specific JEDEC standard test exists, but a close description can be found in the ANSI SEMI standard G30-88.

## 6.4 3.3-V I/O Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | | OPERATION | TEST CONDITIONS | MIN | MAX | UNIT |
|---|---|---|---|---|---|---|
| $V_{IH}$ | High-level input voltage[1] | VDD33 | | 2 | VDD33 | V |
| $V_{IL}$ | Low-level input voltage[1] | VDD33 | | 0 | 0.8 | V |
| | | | JTAG pins only | 0 | 0.55 | |
| $V_I$ | Input voltage | | | 0 | VDD33 | V |
| $V_O$ | Output voltage[2] | | | 0 | VDD33 | V |
| $t_t$ | Input transition time ($t_{rise}$ and $t_{fall}$) | | | 0 | 25 | ns |
| $V_{hys}$ | Input hysteresis[3] | | | | 0.13 x VDD33 | V |
| $V_{OH}$ | High-level output voltage | VDD33 | $I_{OH}$ = -4 mA | 2.4 | | V |
| $V_{OL}$ | Low-level output voltage | VDD33 | $I_{OL}$ = 4 mA | | 0.4 | V |
| $I_{OZ}$ | High-impedance, output current[2] | VDD33 | $V_I$ = 0 to VDD33 | | ±20 | µA |
| $I_{OZP}$ | High-impedance, output current with internal pullup or pulldown resistor[4] | VDD33 | $V_I$ = 0 to VDD33 | | ±225 | µA |
| $I_I$ | Input current[5] | VDD33 | $V_I$ = 0 to VDD33 | | ±15 | µA |

(1) Applies to external inputs and bidirectional buffers.
(2) Applies to external outputs and bidirectional buffers.
(3) Applies to GRSTz.
(4) Applies to pins with internal pullups/pulldowns.
(5) Applies to external input buffers.

## 6.5 Hub Input Supply Current

Typical values measured at $T_A$ = 25°C

## PACKAGING INFORMATION

| Orderable Device | Status (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan (2) | Lead/Ball Finish | MSL Peak Temp (3) | Op Temp (°C) | Device Marking (4/5) | Samples |
|---|---|---|---|---|---|---|---|---|---|---|---|
| TUSB8040A1RKMR | ACTIVE | WQFN | RKM | 100 | 3000 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-3-260C-168 HR | 0 to 70 | TUSB8040A1 RKM | Samples |

**(1)** The marketing status values are defined as follows:
**ACTIVE:** Product device recommended for new designs.
**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.
**OBSOLETE:** TI has discontinued the production of the device.

**(2)** Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
**TBD:** The Pb-Free/Green conversion plan has not been defined.
**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

**(3)** MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**(4)** There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
**(5)** Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

RKM (S−PWQFN−N100)                    PLASTIC QUAD FLATPACK NO−LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No−Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

NOTES:  A.  All linear dimensions are in millimeters.
B.  This drawing is subject to change without notice.
C.  This package is designed to be soldered to a thermal pad on the board.  Refer to Application Note, Quad Flat−Pack
Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets
for specific thermal information, via requirements, and recommended board layout.  These documents are available at
www.ti.com <http://www.ti.com>.
D.  Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release.  Customers should
contact their board assembly site for stencil design recommendations.  Refer to IPC 7525 for stencil design considerations.
E.  Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.

# IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
