

## Low Output, Adjustable, Ultralow-Power, 100-mA Low-Dropout Linear Regulator

Check for Samples: [TPS76201-Q1](#)

### FEATURES

- **Qualified for Automotive Applications**
- **100-mA Low-Dropout Regulator**
- **Adjustable Output Voltage: 0.7 V to 5.5 V**
- **Only 27- $\mu$ A Quiescent Current at 100 mA**
- **1- $\mu$ A Quiescent Current in Standby Mode**
- **Overcurrent Limitation**
- **-40°C to +125°C Operating Ambient Temperature Range**
- **Available in 5-Pin SOT-23 (DBV) Package**

#### DBV PACKAGE (TOP VIEW)

#### GROUND CURRENT vs JUNCTION TEMPERATURE

### DESCRIPTION

The TPS76201-Q1 low-dropout (LDO) voltage regulator features an adjustable output voltage as low as 0.7 V. It is an ideal regulator for sub 1.2-V DSP core voltage supplies and is equally suited for similar applications with other low-voltage processors and controllers. SOT-23 packaging and the high-efficiency that results from the ultralow power regulator operation make the TPS76201-Q1 especially useful in handheld and portable battery applications. This regulator features low dropout voltages and ultralow quiescent current compared to conventional LDO regulators. Offered in a five-terminal, small outline integrated circuit (SOT-23) package, the TPS76201-Q1 is ideal for micropower operations and where board space is at a premium.

A combination of new circuit design and process innovation has enabled the usual PNP pass transistor to be replaced by a PMOS pass element. Because the PMOS pass element is a voltage-driven device, the quiescent current is ultralow (30  $\mu$ A maximum) and is stable over the entire range of output load current (10  $\mu$ A to 100 mA). Intended for use in portable systems such as laptops and cellular phones, the ultralow-power operation results in a significant increase in the system battery operating life.

The TPS76201-Q1 also features a logic-enabled sleep mode to shut down the regulator, reducing quiescent current to 1  $\mu$ A typical at  $T_J = +25^\circ\text{C}$ . The TPS76201-Q1 is offered in an adjustable version (programmable over the range of 0.7 V to 5.5 V).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

All trademarks are the property of their respective owners.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### ORDERING INFORMATION<sup>(1)</sup>

| VOLTAGE <sup>(2)</sup>     | T <sub>A</sub>  | PACKAGE      | PART NUMBER     | PACKAGE MARKING | TRANSPORT MEDIA, QUANTITY |
|----------------------------|-----------------|--------------|-----------------|-----------------|---------------------------|
| Variable<br>0.7 V to 5.5 V | –40°C to +125°C | SOT-23 (DBV) | TPS76201QDBVRQ1 | PUEQ            | Tape and reel, 3000       |

(1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or visit the device product folder at [www.ti.com](http://www.ti.com).

(2) Contact the factory for availability of fixed output options.

### ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>

Over operating free-air temperature range (unless otherwise noted).

| PARAMETER   | TPS76201-Q1                  | UNIT |
|---|------------------------------|------|
| Input voltage range, V <sub>IN</sub> <sup>(2)</sup> | –0.3 to +13.5                | V    |
| Voltage range at $\overline{EN}$                    | –0.3 to V <sub>IN</sub> +0.3 | V    |
| Voltage on OUT, FB                                  | 7                            | V    |
| Peak output current, I <sub>OUT</sub>               | Internally limited           |      |
| Operating ambient temperature range, T <sub>A</sub> | –40 to +150                  | °C   |
| Storage temperature range, T <sub>STG</sub>         | –65 to +150                  | °C   |

(1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

(2) All voltage values are with respect to network ground terminal.

### THERMAL INFORMATION

| THERMAL METRIC <sup>(1)</sup> |  | TPS76201-Q1 | UNITS |
|-------------------------------|--|-------------|-------|
|                               |  | DBV         |       |
|                               |  | 5 PINS      |       |
| θ <sub>JA</sub>               | Junction-to-ambient thermal resistance       | 183.6       | °C/W  |
| θ <sub>JC(top)</sub>          | Junction-to-case(top) thermal resistance     | 69.9        |       |
| θ <sub>JB</sub>               | Junction-to-board thermal resistance         | 41.6        |       |
| ψ <sub>JT</sub>               | Junction-to-top characterization parameter   | 2.4         |       |
| ψ <sub>JB</sub>               | Junction-to-board characterization parameter | 40.9        |       |
| θ <sub>JC(bottom)</sub>       | Junction-to-case(bottom) thermal resistance  | —           |       |

## RECOMMENDED OPERATING CONDITIONS

Over operating free-air temperature range (unless otherwise noted).

|  | MIN  | NOM | MAX  | UNIT |
|--|------|-----|------|------|
| Input voltage range, $V_{IN}^{(1)}$              | 2.7  |     | 10   | V    |
| Output voltage range, $V_{OUT}^{(2)}$            | 0.7  |     | 5.5  | V    |
| Continuous output current, $I_{OUT}^{(2)}$       | 0.01 |     | 100  | mA   |
| Operating ambient temperature range, $T_A^{(2)}$ | -40  |     | +125 | °C   |

- (1) To calculate the minimum input voltage for the desired maximum output current, use the following formula:  $V_{INmin} = V_{OUTmax} + V_{DO}$  (max load)
- (2) Continuous output current and operating junction temperature are limited by internal protection circuitry, but it is not recommended that the device operate under conditions beyond those specified in this table for extended periods of time.

## ELECTRICAL CHARACTERISTICS

Over recommended operating free-air temperature range;  $V_{IN} = V_{OUT(TYP)} + 1$  V;  $I_{OUT} = 100$  mA,  $\overline{EN} = 0$  V, and  $C_{OUT} = 4.7$   $\mu$ F, unless otherwise noted.

| PARAMETER            |  | TEST CONDITIONS   | MIN                   | TYP | MAX                   | UNIT                   |

## APPLICATION INFORMATION

The TPS76201-Q1 low-dropout (LDO) regulator has been optimized for use in battery-operated equipment including, but not limited to, the sub 1.2-V DSP core voltage supplies. It features low quiescent current (23  $\mu$ A nominally) and enable inputs to reduce supply currents to 1  $\mu$ A when the regulators are turned off. A typical application circuit is shown in Figure 18.

**Figure 18. Typical Application Circuit**

### External Capacitor Requirements

Although not required, a 0.047- $\mu$ F or larger ceramic input bypass capacitor, connected between IN and GND and located close to the TPS76201-Q1, is recommended to improve transient response and noise rejection. A higher-value electrolytic input capacitor may be necessary if large, fast-rise-time load transients are anticipated and the device is located several inches from the power source.

Like all low dropout regulators, the TPS76201-Q1 requires an output capacitor connected between OUT and GND to stabilize the internal control loop. The minimum recommended capacitance is 4.7  $\mu$ F. The equivalent series resistance (ESR) of the capacitor should be between 0.3  $\Omega$  and 1.5  $\Omega$  to ensure stability. Capacitor values larger than 4.7  $\mu$ F are acceptable, and allow the use of smaller ESR values. Capacitors less than 4.7  $\mu$ F are not recommended because they require careful selection of ESR to ensure stability. Solid tantalum electrolytic, aluminum electrolytic, and multilayer ceramic capacitors are all suitable, provided they meet the requirements described above. Most of the commercially available 4.7- $\mu$ F surface-mount solid tantalum capacitors, including devices from Sprague, Kemet, and Nichico, meet these ESR requirements. Multilayer ceramic capacitors may have very small equivalent series resistances and therefore may require the addition of a low-value series resistor to ensure stability. Table 1 summarizes the capacitor selection recommendations.

**Table 1. Capacitor Selection**

| PART NO.         | MFR     | VALUE       | MAX ESR <sup>(1)</sup> | SIZE<br>(H x L x W) <sup>(2)</sup> |
|------------------|---------|-------------|------------------------|------------------------------------|
| T494B475K016AS   | KEMET   | 4.7 $\mu$ F | 1.5 $\Omega$           | 1.9 x 3.5 x 2.8                    |
| 195D106x0016x2T  | SPRAGUE | 10 $\mu$ F  | 1.5 $\Omega$           | 1.3 x 7.0 x 2.7                    |
| 695D106x003562T  | SPRAGUE | 10 $\mu$ F  | 1.3 $\Omega$           | 2.5 x 7.6 x 2.5                    |
| TPSC475K035R0600 | AVX     | 4.7 $\mu$ F | 0.6 $\Omega$           | 2.6 x 6.0 x 3.2                    |

(1) ESR is maximum resistance in Ohms at 100 kHz and  $T_A = +25^\circ\text{C}$ . Contact manufacturer for minimum ESR values.

(2) Size is shown in mm.

## Output Voltage Programming

The output voltage of the TPS76201-Q1 adjustable regulator is programmed using an external resistor divider as shown in [Figure 19](#). The output voltage is calculated using:

$$V_{\text{OUT}} = V_{\text{REF}} \times \left( 1 + \frac{R1}{R2} \right) \quad (1)$$

Where:

$$V_{\text{REF}} = 0.6663 \text{ V, typ (the internal reference voltage)}$$

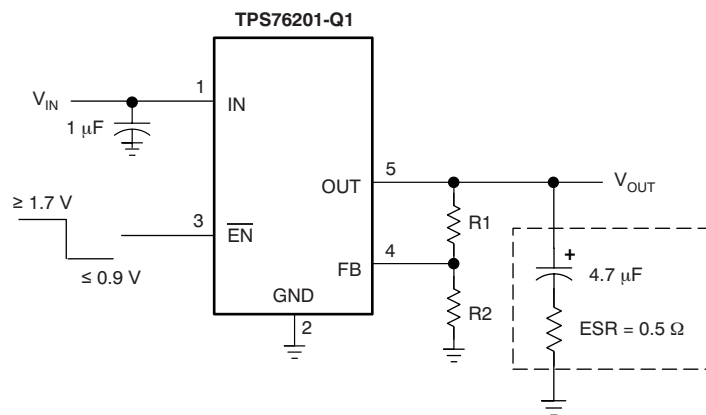

Resistors R1 and R2 should be chosen for approximately 10- $\mu\text{A}$  divider current. Lower value resistors can be used but offer no inherent advantage and waste more power. Higher values should be avoided because leakage currents at FB increase the output voltage error. The recommended design procedure is to choose  $R2 = 66.5 \text{ k}\Omega$  to set the divider current at 10  $\mu\text{A}$  and then calculate R1 using [Equation 2](#):

$$R1 = \left( \frac{V_{\text{OUT}}}{V_{\text{REF}}} - 1 \right) \times R2 \quad (2)$$

**OUTPUT VOLTAGE  
PROGRAMMING GUIDE**

| OUTPUT<br>VOLTAGE<br>(V) | DIVIDER RESISTANCE<br>(k $\Omega$ ) <sup>(1)</sup> |      |
|--------------------------|--|------|
|                          | R1   | R2   |

**Figure 19. TPS76201-Q1 Adjustable LDO Regulator Programming**

## Power Dissipation and Junction Temperature

Specified regulator operation is assured to a junction temperature of +125°C; the maximum junction temperature should be restricted to +150°C under normal operating conditions. This restriction limits the power dissipation the regulator can handle in any given application. To ensure the junction temperature is within acceptable limits, calculate the maximum allowable dissipation,  $P_{D(\text{max})}$ , and the actual dissipation,  $P_D$ , which must be less than or equal to  $P_{D(\text{max})}$ .

The maximum power dissipation limit is determined using [Equation 3](#):

$$P_{D(\text{max})} = \frac{T_{J(\text{max})} - T_A}{R_{\theta\text{JA}}} \quad (3)$$

Where:

$T_{J(\text{max})}$  is the maximum allowable junction temperature.

$R_{\theta\text{JA}}$  is the thermal resistance junction-to-ambient for the package; see the [Thermal Information](#) table.

$T_A$  is the ambient temperature.

The regulator dissipation is calculated using [Equation 4](#):

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} \quad (4)$$

Power dissipation resulting from quiescent current is negligible. Excessive power dissipation triggers the thermal protection circuit.

### Regulator Protection

The TPS76201-Q1 PMOS-pass transistor has a built-in back diode that conducts reverse current when the input voltage drops below the output voltage (for example, during power down). Current is conducted from the output to the input and is not internally limited. If extended reverse voltage operation is anticipated, external limiting might be appropriate.

The TPS76201-Q1 features internal current limiting and thermal protection. During normal operation, the TPS76201-Q1 limits output current to approximately 350 mA. When current limiting engages, the output voltage scales back linearly until the overcurrent condition ends. While current limiting is designed to prevent gross device failure, care should be taken not to exceed the power dissipation ratings of the package. If the temperature of the device exceeds approximately +165°C, thermal protection circuitry shuts it down. Once the device has cooled to below approximately +140°C, regulator operation resumes.

**PACKAGING INFORMATION**

| Orderable Device | Status <sup>(1)</sup> | Package Type | Package Drawing | Pins | Package Qty | Eco Plan <sup>(2)</sup>    | Lead/<br>Ball Finish | MSL Peak Temp <sup>(3)</sup> | Samples<br>(Requires Login)          |
|------------------|-----------------------|--------------|-----------------|------|-------------|----------------------------|----------------------|------------------------------|--------------------------------------|
| TPS76201QDBVRQ1  | ACTIVE                | SOT-23       | DBV             | 5    | 3000        | Green (RoHS<br>& no Sb/Br) | CU NIPDAU            | Level-1-260C-UNLIM           | <a href="#">Request Free Samples</a> |

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DBV (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
