

## LMH2180 75 MHz Dual Clock Buffer

Check for Samples: [LMH2180](#)

### FEATURES

- (Typical Values are:  $V_{\text{SUPPLY}} = 2.7\text{V}$  and  $C_L = 10\text{ pF}$ , unless Otherwise Specified.)
- Small Signal Bandwidth 78 MHz
- Supply Voltage Range 2.4V to 5V
- Phase Noise ( $V_{\text{IN}} = 1\text{ V}_{\text{PP}}$ ,  $f_C = 38.4\text{ MHz}$ ,  $\Delta f = 1\text{ kHz}$ )  $-123\text{ dBc/Hz}$
- Slew Rate 106 V/ $\mu\text{s}$
- Total Supply Current 2.3 mA
- Shutdown Current 30  $\mu\text{A}$
- Rail-to-Rail Input and Output
- Individual Buffer Enable Pins
- Rapid  $T_{\text{on}}$  Technology
- Crosstalk Rejection Circuitry
- Packages:
  - 8-Pin WSON, Solder Bump and no Pullback
  - 8-Bump DSBGA
- Temperature Range  $-40^\circ\text{C}$  to  $85^\circ\text{C}$

### APPLICATIONS

- 3G Mobile Applications
- WLAN–WiMAX Modules
- TD\_SCDMA Multi-Mode MP3 and Camera
- GSM Modules
- Oscillator Modules

### DESCRIPTION

The LMH2180 is a high speed dual clock buffer designed for portable communications and applications requiring multiple accurate multi-clock systems. The LMH2180 integrates two 75 MHz low noise buffers with independent shutdown pins into a small package. The LMH2180 ensures superb system operation between the baseband and the oscillator signal path by eliminating crosstalk between the multiple clock signals.

Unique technology and design provides the LMH2180 with the ability to accurately drive both large capacitive and resistive loads. Low supply current combined with shutdown pins for each channel means the LMH2180 is ideal for battery powered applications. This part does not use an internal ground reference, thus providing additional system flexibility.

The flexible buffers provide system designers the capacity to manage complex clock signals in the latest wireless applications. Each buffer delivers 106 V/ $\mu\text{s}$  internal slew rate with independent shutdown and duty cycle precision. Each input is internally biased to 1V, removing the need for external resistors. Both channels have rail-to-rail inputs and outputs, a gain of one, and are AC coupled with the use of one capacitor.

Replacing a discrete buffer solution with the LMH2180 provides many benefits: simplified board layout, minimized parasitic components, simplified BOM, design durability across multiple applications, simplification of clock paths, and the ability to reduce the number of clock signal generators in the system. The LMH2180 is produced in the tiny packages minimizing the required PCB space.

### TYPICAL APPLICATION

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## CONNECTION DIAGRAMS

**Figure 1. 8-Pin WSON Package**  
See Package Number NGW0008A or NGQ0008A

**Figure 2. 8-Bump DSBGA Package**  
See Package Number YFQ0008AAA

### PIN DESCRIPTIONS

Pin No. WSON	Pin No. DSBGA	Pin Name	Description
1	A3	V <sub>DD</sub>	Voltage supply connection
2	A2	IN 1	Input 1
3	A1	IN 2	Input 2
4	B1	ENABLE 2	Enable buffer 2
5	C1	V <sub>SS</sub>	Ground connection
6	C2	OUT 2	Output 2
7	C3	OUT 1	Output 1
8	B3	ENABLE 1	Enable buffer 1

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### ABSOLUTE MAXIMUM RATINGS <sup>(1)(2)</sup>

Supply Voltages (V <sup>+</sup> – V <sup>-</sup> )	5.5V
ESD Tolerance	
Human Body <sup>(3)</sup>	2000V
Machine Model <sup>(4)</sup>	200V
Charged Device Model	1000V
Storage Temperature Range	-65°C to 150°C
Junction Temperature <sup>(5)</sup>	150°C
Soldering Information	
Infrared or Convection (35 sec.)	235°C

- (1) "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur, including inoperability and degradation of the device reliability and/or performance. Functional operation of the device and/or non-degradation at the Absolute Maximum Ratings or other conditions beyond those indicated in the Recommended Operating Conditions is not implied. The Recommended Operating Conditions indicate conditions at which the device is functional and the device should not be operated beyond such conditions. All voltages are measured with respect to the ground pin, unless otherwise specified.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
- (3) Human body model, applicable std. JESD22-A114C.
- (4) Machine model, applicable std. JESD22-A115-A.
- (5) The maximum power dissipation must be derated at elevated temperatures and is dictated by T<sub>J(MAX)</sub>, θ<sub>JA</sub>, and the ambient temperature T<sub>A</sub>. The maximum allowable power dissipation is P<sub>DMAX</sub> = (T<sub>JMAX</sub> - T<sub>A</sub>) / θ<sub>JA</sub> or the number given in the *Absolute Maximum Ratings*, whichever is lower.

**OPERATING RATINGS** <sup>(1)</sup>

Supply Voltage ( $V^+ - V^-$ )	2.4V to 5.0V
Temperature Range <sup>(2)(3)</sup>	-40°C to 85°C
Package Thermal Resistance <sup>(2)(3)</sup>	
8-Pin WSON ( $\theta_{JA}$ )	217°C/W
8-Bump DSBGA ( $\theta_{JA}$ )	90°C/W

- (1) "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur, including inoperability and degradation of the device reliability and/or performance. Functional operation of the device and/or non-degradation at the Absolute Maximum Ratings or other conditions beyond those indicated in the Recommended Operating Conditions is not implied. The Recommended Operating Conditions indicate conditions at which the device is functional and the device should not be operated beyond such conditions. All voltages are measured with respect to the ground pin, unless otherwise specified.
- (2) The Electrical Characteristics tables show performance under the specified Recommended Operating Conditions except as otherwise modified by the Electrical Characteristics Conditions and/or Notes. Typical values represent typical performance as measured by production tests. Individual parts may vary.
- (3) The maximum power dissipation must be derated at elevated temperatures and is dictated by  $T_{J(MAX)}$ ,  $\theta_{JA}$ , and the ambient temperature  $T_A$ . The maximum allowable power dissipation is  $P_{D(MAX)} = (T_{J(MAX)} - T_A) / \theta_{JA}$  or the number given in the *Absolute Maximum Ratings*, whichever is lower.

**2.7V ELECTRICAL CHARACTERISTICS**

Unless otherwise specified, all limits are specified for  $T_A = 25^\circ\text{C}$ ,  $V_{DD} = 2.7\text{V}$ ,  $V_{SS} = 0\text{V}$ ,  $V_{CM} = 1\text{V}$ ,  $\text{Enable}_{1,2} = V_{DD}$ ,  $C_L = 10\text{pF}$ ,  $R_L = 30\text{k}\Omega$ , Load is connected to  $V_{SS}$ ,  $C_{COUPLING} = 10\text{nF}$ . **Boldface** limits apply at temperature range extremes of operating condition. <sup>(1)</sup>

Parameter		Test Conditions	Min <sup>(2)</sup>	Typ <sup>(3)</sup>	Max <sup>(2)</sup>	Units
<b>Frequency Domain Response</b>						
SSBW	Small Signal Bandwidth	$V_{IN} = 100\text{mV}_{PP}$ ; -3 dB		78		MHz
LSBW	Large Signal Bandwidth	$V_{IN} = 1.0\text{V}_{PP}$ ; -3 dB		60		MHz
GFN	Gain Flatness < 0.1 dB	$f > 100\text{kHz}$		4.9		MHz
<b>Distortion and Noise Performance</b>						
$\Phi_n$	Phase Noise	$V_{IN} = 1\text{V}_{PP}$ , $f_C = 38.4\text{MHz}$ , $\Delta f = 1\text{kHz}$		-123		dBc/Hz
		$V_{IN} = 1\text{V}_{PP}$ , $f_C = 38.4\text{MHz}$ , $\Delta f = 10\text{kHz}$		-132		dBc/Hz
$e_n$	Input-Referred Voltage Noise	$f = 1\text{MHz}$ , $R_{SOURCE} = 50\Omega$		13		nV/ $\sqrt{\text{Hz}}$
$I_{SOLATION}$	Output to Input	$f = 1\text{MHz}$ , $R_{SOURCE} = 50\Omega$		84		dB
CT	Crosstalk Rejection	$f = 38.4\text{MHz}$ , $V_{IN} = 1\text{V}_{PP}$		41		dB
<b>Time Domain Response</b>						
$t_r$	Rise Time	0.1 $V_{PP}$ Step (10-90%)		6		ns
$t_f$	Fall Time			5		ns
$t_s$	Settling Time to 0.1%	1 $V_{PP}$ Step		120		ns
OS	Overshoot	0.1 $V_{PP}$ Step		37		%
SR	Slew Rate <sup>(4)</sup>	$V_{IN} = 2\text{V}_{PP}$		106		V/ $\mu\text{s}$
<b>Static DC Performance</b>						
$I_S$	Supply Current	$\text{Enable}_{1,2} = V_{DD}$ ; No Load		2.3	2.7 <b>2.9</b>	mA
		$\text{Enable}_1 = V_{DD}$ , $\text{Enable}_2 = V_{SS}$ , No Load		1.3	1.5 <b>1.6</b>	mA
		$\text{Enable}_{1,2} = V_{SS}$ ; No Load		30	41 <b>46</b>	$\mu\text{A}$
PSRR	Power Supply Rejection Ratio	DC (3.0V to 5.0V)	65 <b>64</b>	68		dB

- (1) The Electrical Characteristics tables show performance under the specified Recommended Operating Conditions except as otherwise modified by the Electrical Characteristics Conditions and/or Notes. Typical values represent typical performance as measured by production tests. Individual parts may vary.
- (2) Datasheet min/max limits are specified by test or statistical analysis.
- (3) Typical values represent the most likely parametric norms at  $T_A = +25^\circ\text{C}$ , and at the Recommended Operation Conditions at the time of product characterization.
- (4) Slew rate is the average of the rising and falling slew rates.

## 2.7V ELECTRICAL CHARACTERISTICS (continued)

Unless otherwise specified, all limits are specified for  $T_A = 25^\circ\text{C}$ ,  $V_{DD} = 2.7\text{V}$ ,  $V_{SS} = 0\text{V}$ ,  $V_{CM} = 1\text{V}$ ,  $\text{Enable}_{1,2} = V_{DD}$ ,  $C_L = 10\text{ pF}$ ,  $R_L = 30\text{ k}\Omega$ , Load is connected to  $V_{SS}$ ,  $C_{COUPLING} = 10\text{ nF}$ . **Boldface** limits apply at temperature range extremes of operating condition.<sup>(1)</sup>

Parameter	Test Conditions	Min <sup>(2)</sup>	Typ <sup>(3)</sup>	Max <sup>(2)</sup>	Units	
$A_{CL}$	Small Signal Voltage Gain	$V_{IN} = 0.2 V_{PP}$	<b>0.95</b>	1.0	<b>1.05</b>	V/V
$V_{OS}$	Output Offset Voltage		-0.5	<b>17</b> <b>18</b>	mV	
TC $V_{OS}$	Temperature Coefficient Output Offset Voltage <sup>(5)</sup>		2.8		$\mu\text{V}/^\circ\text{C}$	
$R_{OUT}$	Output Resistance	$f = 100\text{ kHz}$		0.6	$\Omega$	
		$f = 38.4\text{ MHz}$		166		
		disabled	High Impedance			
<b>Miscellaneous Performance</b>						
$R_{IN}$	Input Resistance per Buffer	Enable = $V_{DD}$		137	k $\Omega$	
		Enable = $V_{SS}$		137		
$C_{IN}$	Input Capacitance per Buffer	Enable = $V_{DD}$		1.3	pF	
		Enable = $V_{SS}$		1.3		
$Z_{IN}$	Input Impedance	$f = 38.4\text{ MHz}$ , Enable = $V_{DD}$		4.5	k $\Omega$	
		$f = 38.4\text{ MHz}$ , Enable = $V_{SS}$		4.2		
$V_O$	Output Swing Positive	$V_{IN} = V_{DD}$	2.66 <b>2.65</b>	2.69	V	
	Output Swing Negative	$V_{IN} = V_{SS}$		19	<b>35</b> <b>37</b>	mV
$I_{SC}$	Output Short-Circuit Current <sup>(6)(7)</sup>	Sourcing, $V_{IN} = V_{DD}$ , $V_{OUT} = V_{SS}$	-21 <b>-18</b>	-25	mA	
		Sinking, $V_{IN} = V_{SS}$ , $V_{OUT} = V_{DD}$	<b>23</b> <b>15</b>	25		
$V_{en\_hmin}$	Enable High Active Minimum Voltage		1.2		V	
$V_{en\_lmax}$	Enable Low Inactive Maximum Voltage		0.6			

(5) Average Temperature Coefficient is determined by dividing the changing in a parameter at temperature extremes by the total temperature change.

(6) Short-Circuit test is a momentary test. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of  $150^\circ\text{C}$ .

(7) Positive current corresponds to current flowing into the device.

## 5V ELECTRICAL CHARACTERISTICS

Unless otherwise specified, all limits are specified for  $T_A = 25^\circ\text{C}$ ,  $V_{DD} = 5\text{V}$ ,  $V_{SS} = 0\text{V}$ ,  $V_{CM} = 1\text{V}$ ,  $\text{Enable}_{1,2} = V_{DD}$ ,  $C_L = 10\text{ pF}$ ,  $R_L = 30\text{ k}\Omega$ , Load is connected to  $V_{SS}$ ,  $C_{COUPLING} = 10\text{ nF}$ . **Boldface** limits apply at temperature range extremes of operating condition.<sup>(1)</sup>

Parameter	Test Conditions	Min <sup>(2)</sup>	Typ <sup>(3)</sup>	Max <sup>(2)</sup>	Units
<b>Frequency Domain Response</b>					
SSBW	Small Signal Bandwidth	$V_{IN} = 100\text{ mV}_{PP}$ ; -3 dB		87	MHz
LSBW	Large Signal Bandwidth	$V_{IN} = 1.0\text{ V}_{PP}$ ; -3 dB		68	MHz
GFN	Gain Flatness < 0.1 dB	$f > 100\text{ kHz}$		25	MHz
<b>Distortion and Noise Performance</b>					
$\phi_n$	Phase Noise	$V_{IN} = 1\text{ V}_{PP}$ , $f_C = 38.4\text{ MHz}$ , $\Delta f = 1\text{ kHz}$		-123	dBc/Hz
		$V_{IN} = 1\text{ V}_{PP}$ , $f_C = 38.4\text{ MHz}$ , $\Delta f = 10\text{ kHz}$		-132	dBc/Hz

(1) The Electrical Characteristics tables show performance under the specified Recommended Operating Conditions except as otherwise modified by the Electrical Characteristics Conditions and/or Notes. Typical values represent typical performance as measured by production tests. Individual parts may vary.

(2) Datasheet min/max limits are specified by test or statistical analysis.

(3) Typical values represent the most likely parametric norms at  $T_A = +25^\circ\text{C}$ , and at the Recommended Operation Conditions at the time of product characterization.

**5V ELECTRICAL CHARACTERISTICS (continued)**

Unless otherwise specified, all limits are specified for  $T_A = 25^\circ\text{C}$ ,  $V_{DD} = 5\text{V}$ ,  $V_{SS} = 0\text{V}$ ,  $V_{CM} = 1\text{V}$ ,  $\text{Enable}_{1,2} = V_{DD}$ ,  $C_L = 10\text{ pF}$ ,  $R_L = 30\text{ k}\Omega$ , Load is connected to  $V_{SS}$ ,  $C_{COUPLING} = 10\text{ nF}$ . **Boldface** limits apply at temperature range extremes of operating condition.<sup>(1)</sup>

Parameter		Test Conditions	Min <sup>(2)</sup>	Typ <sup>(3)</sup>	Max <sup>(2)</sup>	Units
$e_n$	Input-Referred Voltage Noise	$f = 1\text{ MHz}$ , $R_{SOURCE} = 50\Omega$		12		nV/ $\sqrt{\text{Hz}}$
$I_{SOLATION}$	Output to Input	$f = 1\text{ MHz}$ , $R_{SOURCE} = 50\Omega$		84		dB
CT	Crosstalk Rejection	$f = 38.4\text{ MHz}$ , $P_{IN} = 0\text{ dBm}$		59		dB
<b>Time Domain Response</b>

## APPLICATION INFORMATION

### GENERAL

The LMH2180 is designed to minimize the effects of spurious signals from the base chip to the oscillator. Also the influence of varying load resistance and capacitance to the oscillator is minimized, while the drive capability is increased.

The inputs of the LMH2180 are internally biased at 1V, making AC coupling possible without external bias resistors.

To optimize current consumption, a buffer that is not in use can be disabled by connecting its enable pin to  $V_{SS}$ .

The LMH2180 has no internal ground reference; therefore, either single or split supply configurations can be used.

The LMH2180 is an easy replacement for discrete circuitry. It simplifies board layout and minimizes the effect of layout related parasitic components.

### INPUT CONFIGURATION

The internal 1V input biasing allows AC coupling of the input signal. This biasing avoids the use of external resistors, as depicted in [Figure 36](#). The biasing prevents a large DC load at the oscillator's output that creates a load impedance and may affect its oscillating frequency. As a result of this biasing, the maximum amplitude of the AC signal is  $2V_{PP}$ .

The coupling capacitance  $C1$  should be large enough to let the AC signal pass. This is a unity gain buffer with rail-to-rail inputs and outputs.

Figure 36. Input Configuration

### FREQUENCY PULLING

Frequency pulling is the frequency variation of an oscillator caused by a varying load. In the typical application, the load of the oscillator is a fixed capacitor ( $C1$ ) in series with the input impedance of the buffer.

To keep the input impedance as constant as possible, the input is biased at 1V, even when the part is disabled. A simplified schematic of the input configuration is shown in [Figure 36](#).

### ISOLATION AND CROSSTALK

Output to input isolation prevents the clock signal of the oscillator from being affected by spurious signals generated by the digital blocks behind the output buffer. See [Figure 13](#).

A block diagram of the isolation is shown in [Figure 37](#). Crosstalk rejection between buffers prevents signals from affecting each other. [Figure 37](#) shows a Baseband IC and a Bluetooth module as an example. See [Figure 14](#) for more information.

**Figure 37. Isolation Block Diagram**

## DRIVING CAPACITIVE LOADS

Each buffer can drive a capacitive load. Be aware that every capacitor directly connected to the output becomes part of the loop of the buffer. In most applications the load consists of the capacitance of copper tracks and the input capacitance of the application blocks. Capacitance reduces the gain/phase margin and decreases the stability. This leads to peaking in the frequency response and in extreme situations oscillations can occur. To drive a large capacitive load it is recommended to include a series resistor between the buffer and the load capacitor. The best value for this isolation resistance can be found by experimentation.

The LMH2180 datasheet reflects measurements with capacitive loads of 10 pF at the output of the buffers. Most common applications will probably use a lower capacitive load, which will result in lower peaking and significantly greater bandwidth, see [Figure 38](#).

**Figure 38. Bandwidth and Peaking**

## PHASE NOISE

A clock buffer adds noise to the clock signal. This noise causes uncertainty in the phase of the clock signal. This uncertainty is described by jitter (time domain) or phase noise (frequency domain). Communication systems, such as Wireless LAN, require a low jitter/phase noise clock signal to obtain a low Bit Error Rate. [Figure 39](#) shows the frequency domain representation of a clock signal with frequency  $f_C$ . Without Phase Noise the entire signal power would only be located at the frequency  $f_C$ . Phase Noise spreads some of the power to adjacent frequencies. Phase Noise is usually specified in dBc/Hz at a given frequency offset  $\Delta f$  from the carrier, where dBc is the power level in dB relative to the carrier. The noise power is measured within a 1 Hz bandwidth.

Figure 39. Phase Noise

Figure 40 shows the setup used to measure the LMH2180 phase noise. The clock driving the LMH2180 is a state of the art 38.4MHz TCXO. Both the TCXO phase noise and the phase noise at the LMH2180 output were measured. At offset frequencies of 1 kHz and higher from the carrier, the TCXO phase noise is sufficiently low to accurately calculate the LMH2180 contribution to the phase noise at the output. The LMH6559, whose phase noise contribution can be neglected, is used to drive the 50Ω input impedance of the Signal Source Analyzer.

**LAYOUT DESIGN RECOMMENDATION**

Careful consideration during circuit design and PCB layout will eliminate problems and will optimize the performance of the LMH2180. It is best to have the same ground plane on the PCB for all decoupling and other ground connections.

To ensure a clean supply voltage it is best to place decoupling capacitors close to the LMH2180, between V<sub>DD</sub> and V<sub>SS</sub>.

Another important issue is the value of the components, because this also determines the sensitivity to disturbances. Resistor values have to be low enough to avoid a significant noise contribution and large enough to avoid a significant increase in power consumption while loading inputs or outputs to heavily.

Figure 40. Measurement Setup

## REVISION HISTORY

Changes from Revision C (March 2013) to Revision D	Page
• Changed layout of National Data Sheet to TI format .....	<a href="#">15</a>

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
LMH2180SD/NOPB	ACTIVE	WSON	NGQ	8	1000	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 85	2180S	<a href="#">Samples</a>
LMH2180SDE/NOPB	ACTIVE	WSON	NGQ	8	250	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 85	2180S	<a href="#">Samples</a>
LMH2180SDX/NOPB	ACTIVE	WSON	NGQ	8	4500	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 85	2180S	<a href="#">Samples</a>
LMH2180TM/NOPB	ACTIVE	DSBGA	YFQ	8	250	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM		A	<a href="#">Samples</a>
LMH2180TMX/NOPB	ACTIVE	DSBGA	YFQ	8	3000	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM		A	<a href="#">Samples</a>
LMH2180YD/NOPB	ACTIVE	SON	NGW	8	1000	Green (RoHS & no Sb/Br)	CU SNAGCU	Level-1-260C-UNLIM	-40 to 85	2180Y	<a href="#">Samples</a>
LMH2180YDX/NOPB	ACTIVE	SON	NGW	8	4500	Green (RoHS & no Sb/Br)	CU SNAGCU	Level-1-260C-UNLIM	-40 to 85	2180Y	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
