

## +3.3V Programmable LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link -65 MHz +3.3V LVDS Transmitter 18-Bit Flat Panel Display (FPD) Link -65 MHz

Check for Samples: [DS90C363A](#), [DS90CF363A](#)

### FEATURES

- 20 to 65 MHz shift clock support
- Rejects  $> \pm 3$ ns Jitter from VGA chip with less than 225ps output Jitter at 65MHz (TJCC)
- Best-in-Class Set and Hold Times on TxINPUTs
- Tx power consumption  $< 130$  mW (typ) at 65MHz Grayscale
- $> 50\%$  Less Power Dissipation than BiCMOS Alternatives
- Tx Power-down mode  $< 200\mu$ W (max)
- ESD rating  $> 7$  kV (HBM),  $> 500$ V (EIAJ)
- Supports VGA, SVGA, XGA and Dual Pixel SXGA
- Narrow bus reduces cable size and cost
- Up to 1.3 Gbps throughput
- Up to 170 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 48-lead TSSOP package
- Improved replacement for:
  - SN75LVDS85 — DS90C363A

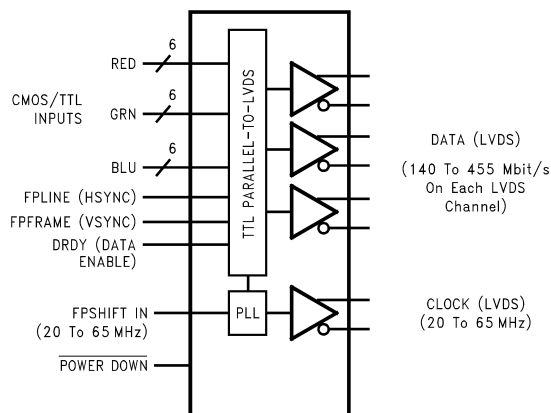

– SN75LVDS84 — DS90CF363A

### DESCRIPTION

The DS90C363A/DS90CF363A transmitter converts 21 bits of CMOS/TTL data into three LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fourth LVDS link. Every cycle of the transmit clock 21 bits of input data are sampled and transmitted. At a transmit clock frequency of 65 MHz, 18 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughput is 170 Mbytes/sec. The DS90C363A transmitter can be programmed for Rising edge strobe or Falling edge strobe through a dedicated pin. The DS90CF363A is fixed as a Falling edge strobe transmitter. A Rising edge or Falling edge strobe transmitter will interoperate with a Falling edge strobe Receiver (DS90CF364) without any translation logic.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

### Block Diagram

**Figure 1. DS90C363A/DS90CF363A**

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

All trademarks are the property of their respective owners.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### Absolute Maximum Ratings<sup>(1)</sup>

Supply Voltage ( $V_{CC}$ )		-0.3V to +4V
CMOS/TTL Input Voltage		-0.3V to ( $V_{CC} + 0.3V$ )
LVDS Driver Output Voltage		-0.3V to ( $V_{CC} + 0.3V$ )
LVDS Output Short Circuit Duration		Continuous
Junction Temperature		+150°C
Storage Temperature		-65°C to +150°C
Lead Temperature (Soldering, 4 seconds)		+260°C
Maximum Package Power Dissipation Capacity at 25°C	TSSOP Package	1.98 W
Power Dissipation Derating		16 mW/°C above +25°C
ESD Rating	HBM, 1.5 k $\Omega$ , 100 pF	> 7 kV
	EIAJ, 0 $\Omega$ , 200 pF	> 500V

(1) "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The tables of "Electrical Characteristics" specify conditions for device operation.

### Recommended Operating Conditions

	Min	Nom	Max	Unit
Supply Voltage ( $V_{CC}$ )	3.0	3.3	3.6	V
Operating Free Air Temperature ( $T_A$ )	-10	+25	+70	°C
Receiver Input Range	0		2.4	V
Supply Noise Voltage ( $V_{CC}$ )			100	mV <sub>PP</sub>
TxCLKIN frequency	18		68	MHz

(1) The Minimum and Maximum Limits are based on statistical analysis of the device performance over process, voltage, and temperature ranges. This parameter is functionality tested only on Automatic Test Equipment (ATE).

(2) The Limits are based on statistical analysis of the device performance over process, voltage, and temperature ranges. Output jitter is measured with a cycle-to-cycle jitter of 3ns applied to the input clock signal. A jitter event of 3ns, represents worse case jump in the clock edge from most Graphics controller VGA chips currently available. This parameter is used when calculating system margin (RSKM). See Figures 12, 13 and AN-1059.

## PIN ASSIGNMENTS

**Table 1. DS90C363A Pin Description—FPD Link Transmitter**

Pin Name	I/O	No.	Description
TxIN	I	21	TTL level input. This includes: 6 Red, 6 Green, 6 Blue, and 3 control lines—FPLINE, FPFRAME and DRDY (also referred to as HSYNC, VSYNC, Data Enable).
TxOUT+	O	3	Positive LVDS differential data output.
TxOUT-	O	3	Negative LVDS differential data output.
FPSHIFT IN	I	1	TTL level clock input. The falling edge acts as data strobe. Pin name TxCLK IN.
R_FB	I	1	Programmable strobe select (See Table 1).
TxCLK OUT+	O	1	Positive LVDS differential clock output.
TxCLK OUT-	O	1	Negative LVDS differential clock output.
$\overline{\text{PWR DOWN}}$	I	1	TTL level input. Assertion (low input) TRI-STATES the outputs, ensuring low current at power down. See Applications Information section.
V <sub>CC</sub>	I	3	Power supply pins for TTL inputs.
GND	I	4	Ground pins for TTL inputs.
PLL V <sub>CC</sub>	I	1	Power supply pin for PLL.
PLL GND	I	2	Ground pins for PLL.
LVDS V <sub>CC</sub>	I	1	Power supply pin for LVDS outputs.
LVDS GND	I	3	Ground pins for LVDS outputs.

PLL V <sub>CC</sub>	I	1	Power supply pin for PLL.
PLL GND	I	2	Ground pins for PLL.
LVDS V <sub>CC</sub>	I	1	Power supply pin for LVDS outputs.
LVDS GND	I	3	Ground pins for LVDS outputs.

## APPLICATIONS INFORMATION

The DS90C363A/DS90CF363A are backward compatible with the DS90C363/DS90CF363 and are a pin-for-pin replacement. The device (DS90C363A/DS90CF363A) utilizes a different PLL architecture employing an internal 7X clock for enhanced pulse position control.

This device (DS90C363A/DS90CF363A) also features reduced variation of the TCCD parameter which is important for dual pixel applications. (See AN-1084) TCCD variation has been measured to be less than 250ps at 65MHz under normal operating conditions.

This device may also be used as a replacement for the DS90CF563 (5V, 65MHz) and DS90CF561 (5V, 40MHz) FPD-Link Transmitters with certain considerations/modifications:

1. Change 5V power supply to 3.3V. Provide this supply to the  $V_{CC}$ , LVDS  $V_{CC}$  and PLL  $V_{CC}$  of the transmitter.
2. The DS90C363A transmitter input and control inputs accept 3.3V TTL/CMOS levels. They are not 5V tolerant.
3. To implement a falling edge device for the DS90C363A, the R\_FB pin (pin 14) may be tied to ground OR left unconnected (an internal pull-down resistor biases this pin low). Biasing this pin to  $V_{CC}$  implements a rising edge device.

### TRANSMITTER CLOCK JITTER CYCLE-TO-CYCLE

Figures 12 and 13 illustrate the timing of the input clock relative to the input data. The input clock (TxCLKin) is intentionally shifted to the left  $-3ns$  and  $+3ns$  to the right when data (Txin0-27) is high. This 3ns of cycle-to-cycle clock jitter is repeated at a period of  $2\mu s$ , which is the period of the input data ( $1\mu s$  high,  $1\mu s$  low). At different operating frequencies the N Cycle is changed to maintain the desired 3ns cycle-to-cycle jitter at  $2\mu s$  period.

### TRANSMITTER INPUT CLOCK

The transmitter input clock must always be present when the device is enabled ( $\overline{PWR\_DOWN} = HIGH$ ). If the clock is stopped, the  $\overline{PWR\_DOWN}$  pin must be used to disable the PLL. The  $\overline{PWR\_DOWN}$  pin must be held low until after the input clock signal has been reapplied. This will ensure a proper device reset and PLL lock to occur.

### POWER SEQUENCING AND POWERDOWN MODE

Outputs of the transmitter remain in TRI-STATE until the power supply reaches 2V. Clock and data outputs will begin to toggle 10 ms after  $V_{CC}$  has reached 3V and the Powerdown pin is above 1.5V. Either device may be placed into a powerdown mode at any time by asserting the Powerdown pin (active low). Total power dissipation for each device will decrease to  $5\mu W$  (typical).

The transmitter input clock may be applied prior to powering up and enabling the transmitter. The transmitter input clock may also be applied after power up; however, the use of the  $\overline{PWR\_DOWN}$  pin is required as described in the Transmitter Input Clock section. Do not power up and enable ( $\overline{PWR\_DOWN} = HIGH$ ) the transmitter without a valid clock signal applied to the TxCLK IN pin.

The FPD Link chipset is designed to protect itself from accidental loss of power to either the transmitter or receiver. If power to the transmit board is lost, the receiver clocks (input and output) stop. The data outputs (RxOUT) retain the states they were in when the clocks stopped. When the receiver board loses power, the receiver inputs are controlled by a failsafe bias circuitry. The LVDS inputs are High-Z during initial power on and power off conditions. Current is limited (5 mA per input) by the fixed current mode drivers, thus avoiding the potential for latchup when powering the device.

### RECEIVER FAILSAFE FEATURE

The FPD Link receivers have input failsafe bias circuitry to guarantee a stable receiver output for floating or terminated receiver inputs. Under these conditions receiver inputs will be pulled to a HIGH state. This is the case if not all data channels are required in the application. Leave the extra channel's inputs open. This minimizes power dissipation and locks the unused channels outputs into a stable known (HIGH) state.

If a clock signal is present, data outputs will all be HIGH; if the clock input is also floating/terminated, data outputs will remain in the last valid state. A floating/terminated clock input will result in a LOW clock output.

## REVISION HISTORY

Changes from Revision D (April 2013) to Revision E	Page
• Changed layout of National Data Sheet to TI format .....	11

---

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
