

## DS100MB201 Dual Lane 2:1/1:2 Mux/Buffer with Equalization

Check for Samples: [DS100MB201](#)

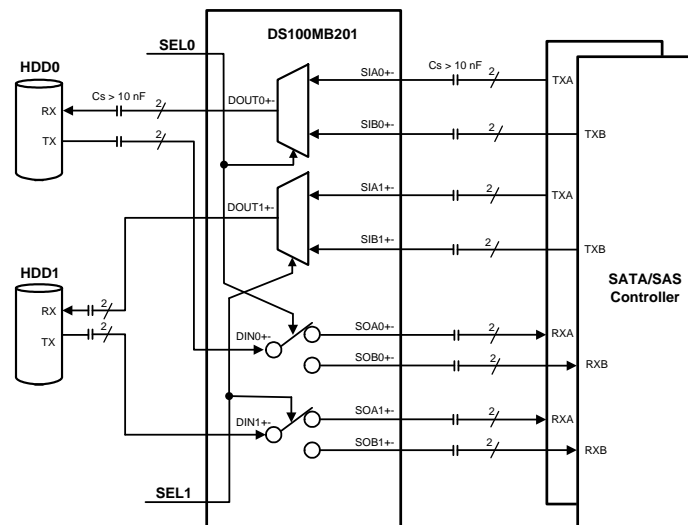

### FEATURES

- Up to 10.3125 Gbps
- Dual Lane 2:1 Mux, 1.2 Switch or Fanout
- Adjustable Transmit Differential Output Voltage ( $V_{OD}$ )
- $<0.3$  UI of Residual DJ at 10.3125 Gbps with 10" FR4 trace
- Adjustable Electrical IDLE Detect Threshold
- Signal Conditioning Programmable through SMBus I/F
- Single 2.5V Supply Operation
- $>6$  kV HBM ESD Rating
- 3.3V Tolerant SMBus Interface
- High Speed Signal flow–thru Pinout
- Package: 54-pin WQFN (10 mm x 5.5 mm)

### APPLICATIONS

- XAUI (3.125 Gbps), RXAUI (6.25 Gbps)
- sRIO – Serial Rapid I/O
- Fibre Channel (8.5 Gbps)
- 10GBase-CX4, InfiniBand (QDR, SDR & DDR)
- FR4 Backplane Traces

### Typical Application

### DESCRIPTION

The DS100MB201 is a dual lane 2:1 multiplexer and 1:2 switch or fan-out buffer with signal conditioning suitable for 10GE, Fibre Channel, Infiniband, SATA/SAS and other high-speed bus applications up to 10.3125 Gbps. The device performs receive equalization allowing maximum flexibility of physical placement within a system. The receiver's continuous time linear equalizer (CTLE) provides a boost to compensate for 10" of 4 mil FR4 stripline at 10.3125 Gbps. The DS100MB201 is capable of opening an input eye that is completely closed due to inter-symbol interference (ISI) induced by the interconnect medium. The transmitter features a programmable amplitude voltage levels to be selected from 600 mVp-p to 800 mVp-p. The signal conditioning settings are programmable with register control.

With a typical power consumption of 100 mW/channel at 10.3125 Gbps, and SMBus register control to turn-off unused lanes, the DS100MB201 is part of TI's PowerWise family of energy efficient devices.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Pin Diagram

Figure 1. DS100MB201 Pin Diagram 54L WQFN Package  
See Package Number NJY0054A

PIN DESCRIPTIONS<sup>(1)</sup>

Pin Name	Pin Number	I/O, Type <sup>(2)(3)(4)</sup>	Pin Description
<b>Differential High Speed I/O's</b>			
SIA0+, SIA0-, SIA1+, SIA1-	45, 44, 40, 39	I, CML	Inverting and non-inverting CML differential inputs to the equalizer. A gated on-chip 50Ω termination resistor connects SIA_n+ to VDD and SIA_n- to VDD when enabled.
SOA0+, SOA0-, SOA1+, SOA1-	35, 34, 31, 30	O	Inverting and non-inverting low power differential signaling 50Ω outputs. Fully compatible with AC coupled CML inputs.
SIB0+, SIB0-, SIB1+, SIB1-	43, 42, 38, 37	I, CML	Inverting and non-inverting CML differential inputs to the equalizer. A gated on-chip 50Ω termination resistor connects SIB_n+ to VDD and SIB_n- to VDD when enabled.
SOB0+, SOB0-, SOB1+, SOB1-	33, 32, 29, 28	O	Inverting and non-inverting low power differential signaling 50Ω outputs. Fully compatible with AC coupled CML inputs.
DIN0+, DIN0-, DIN1+, DIN1-	10, 11, 15, 16	I, CML	Inverting and non-inverting CML differential inputs to the equalizer. A gated on-chip 50Ω termination resistor connects SIB_n+ to VDD and SIB_n- to VDD when enabled.

(1) 1 = HIGH, 0 = LOW, FLOAT = 3rd input state.  
 (2) FLOAT condition; Do not drive pin; pin is internally biased to mid level with 50 kΩ pull-up/pull-down.  
 (3) Internal pulled-down = Internal 30 kΩ pull-down resistor to GND is present on the input.  
 (4) Input edge rate for LVCMOS/FLOAT inputs must be faster than 50 ns from 10–90%.

**PIN DESCRIPTIONS<sup>(1)</sup> (continued)**

Pin Name	Pin Number	I/O, Type <sup>(2)(3)(4)</sup>	Pin Description
DOUT0+, DOUT0-, DOUT1+, DOUT1-	3, 4, 7, 8	O	Inverting and non-inverting low power differential signaling 50Ω outputs. Fully compatible with AC coupled CML inputs.
<b>Control Pins — (LVCMOS)</b>			
ENSMB	48	I, LVCMOS w/ internal pull-down	System Management Bus (SMBus) enable pin. LOW = Reserved HIGH = Register Access: Provides access to internal digital registers to control such functions as equalization, VOD, channel powerdown, and idle detection threshold. Please refer to <a href="#">System Management Bus (SMBus) and Configuration Registers</a> for detailed information.
SDA	49	I, LVCMOS	The SMBus bi-directional SDA pin. Data input or open drain output. External pull-up resistor is required. Refer to R <sub>term</sub> in the SMBus specification.
SCL	50	I, LVCMOS	SMBUS clock input pin. External pull-up resistor maybe needed. Refer to R <sub>term</sub> in the SMBus specification.
AD[3:0]	46, 47, 53, 54	I, LVCMOS w/ internal pull-down	SMBus Slave Address Inputs. These pins set the SMBus address.
<b>Control Pins — (LVCMOS)</b>			
RATE	21	I, Float, LVCMOS	LOW = Reserved HIGH = 10.3125 Gbps operation
TXIDLEDO	24	I, Float, LVCMOS	TXIDLEDO, 3-level input controls the driver output. LOW = disable the signal detect/squelch function for DOUT. FLOAT = enable the signal auto detect/squelch function for DOUT and the signal detect voltage threshold level can be adjusted using the SD_TH pin. HIGH = force the DOUT to be muted (electrical idle). See <a href="#">Table 1</a>
TXIDLESO	25	I, Float, LVCMOS	TXIDLESO, 3-level input controls the driver output. LOW = disable the signal detect/squelch function for SOUT. FLOAT = enable the signal auto detect/squelch function for SOUT and the signal detect voltage threshold level can be adjusted using the SD_TH pin. HIGH = force the SOUT to be muted (electrical idle). See <a href="#">Table 1</a>
FANOUT	26	I, LVCMOS w/ internal pull-down	LOW = disable one of the outputs depending on the SEL0, SEL1 pin. HIGH = enable both A/B outputs for broadcast mode. FANOUT = 0 See <a href="#">Table 3</a>
SEL0, SEL1	19, 20	I, LVCMOS w/ internal pull-down	SEL0 is for lane 0, SEL1 is for lane 1 SEL0, SEL1 = 0 selects B input and B output. SEL0, SEL1 = 1 selects A input and A output. See <a href="#">Table 3</a>
Reserved	52	I, LVCMOS	<b>Tie to GND</b>
<b>Analog</b>			
SD_TH	27	I, ANALOG	Threshold select pin for electrical idle detect threshold. Float pin for default 130 mVp-p (differential). See <a href="#">Table 2</a>
<b>Power</b>			
VDD	9, 14, 36, 41, 51	Power	2.5V Power supply pins.
GND	DAP	Power	DAP is the large metal contact at the bottom side, located at the center of the 54 pin LLP package. It should be connected to the GND plane with at least 4 via to lower the ground impedance and improve the thermal performance of the package.
Reserved	1, 2, 5, 6, 12, 13, 17, 18, 22, 23		No Connect — <b>Leave pin open</b>

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

**Absolute Maximum Ratings<sup>(1)(2)</sup>**

Supply Voltage (VDD)		-0.5V to +3.0V
LVC MOS Input/Output Voltage		-0.5V to +4.0V
Differential Input Voltage		-0.5V to (VDD+0.5V)
Differential Output Voltage		-0.5V to (VDD+0.5V)
Analog (SD_TH)		-0.5V to (VDD+0.5V)
Junction Temperature		+105°C
Storage Temperature		-40°C to +125°C
Maximum Package Power Dissipation at 25°C	NJY0054A Package	4.21 W
Derate NJY0054A Package		52.6mW/°C above +25°C
ESD Rating	HBM, STD - JESD22-A114C	≥±6 kV
	MM, STD - JESD22-A115-A	≥±250 V
	CDM, STD - JESD22-C101-C	≥±1250 V
Thermal Resistance	$\theta_{JC}$	11.5°C/W
	$\theta_{JA}$ , No Airflow, 4 layer JEDEC	19.1°C/W

- (1) "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur, including inoperability and degradation of device reliability and/or performance. Functional operation of the device and/or non-degradation at the Absolute Maximum Ratings or other conditions beyond those indicated in the Recommended Operating Conditions is not implied. The Recommended Operating Conditions indicate conditions at which the device is functional and the device should not be operated beyond such conditions. Absolute Maximum Numbers are guaranteed for a junction temperature range of -40°C to +125°C. Models are validated to Maximum Operating Voltages only.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.

**Recommended Operating Conditions<sup>(1)</sup>**

	Min	Typ	Max	Units
Supply Voltage, VDD to GND	2.375	2.5	2.625	V
Ambient Temperature <sup>(2)</sup>	-40	25	+85	°C
LVC MOS	0		2.625	V
SMBus (SDA, SCL)	0		3.6	V
CML Differential Input Voltage	0		2.0	V <sub>p-p</sub>
Supply Noise Tolerance up to 50 MHz <sup>(3)</sup>		100		mV <sub>p-p</sub>

- (1) For soldering specifications: see product folder at: <http://www.ti.com>, <http://www.ti.com/lit/SNOA549>
- (2) OOB signal pass-through limited to a minimum ambient temperature of -10°C.
- (3) Allowed supply noise (mV<sub>p-p</sub> sine wave) under typical conditions.

## Electrical Characteristics<sup>(1)</sup>

Over recommended operating supply and temperature ranges with default register settings unless other specified.

- (1) The Electrical Characteristics tables list guaranteed specifications under the listed Recommended Operating Conditions except as otherwise modified or specified by the Electrical Characteristics Conditions and/or Notes. Typical specifications are estimations only and are not guaranteed.
- (2) Measured with ENSMB = 1, all channels disabled using SMBus registers 0x01 and 0x02, and EQ in bypass (Default).
- (3) Typical values represent most likely parametric norms at V<sub>DD</sub> = 2.5V, T<sub>A</sub> = 25°C., and at the Recommended Operation Conditions at the time of product characterization and are not guaranteed.
- (4) Measured at package pins of receiver. Less than 65 mVp-p is IDLE, greater than 175 mVp-p is ACTIVE. SD\_TH pin connected with resistor to GND overrides this default setting.

## Electrical Characteristics<sup>(1)</sup> (continued)

Over recommended operating supply and temperature ranges with default register settings unless other specified.

Parameter	Test Conditions	Min	Typ	Max	Units	
<b>DIFFERENTIAL OUTPUTS (OUT<sub>n+</sub>, OUT<sub>n-</sub>)</b>

Figure 5. SMBus Timing Parameters

## Functional Description

The DS100MB201 is a 2-lane signal conditioning 2:1 multiplexer and 1:2 switch or fan-out buffer optimized for PCB FR4 trace up to 10.3125 Gbps data rate. The DS100MB201 has direct register access through the SMBus. The ENSMB pin must be tied high to enable proper operation of the DS100MB201.

### Pin Control Mode

The RATE pin must be forced HIGH to enable 10.3125 Gbps operation. The receiver electrical idle detect threshold is also programmable via an optional external resistor on the SD\_TH pin.

### SMBUS Register Programming

In SMBus mode the VOD amplitude level and equalization are all programmable on a individual lane basis. On power-up and when ENSMB is driven low all registers are reset to their default state.

**Table 1. Idle Control (3-Level Input)**

TXIDLEDO/SO	Function
0	This state is for lossy media, dedicated Idle threshold detect circuit disabled, output follows input based on EQ settings. Idle state not guaranteed.
Float	Float enables automatic idle detection. Idle on the input is passed to the output. Internal 50KΩ resistors hold TXIDLEDO/SO pin at a mid level - don't connect this pin if the automatic idle detect function is desired. This is the default state. Output in Idle if differential input signal less than value set by SD_TH pin.
1	Manual override, output in electrical Idle. Differential inputs are ignored.

**Table 2. Receiver Electrical Idle Detect Threshold Adjust**

SD_TH resistor value (Ω)	Receiver Electrical Idle Detect Threshold (DIFF p-p)
Float (no resistor required)	130 mV (default condition)
0	225 mV
80k	20 mV

SD\_TH resistor value can be set from 0 through 80k ohms to achieve desired idle detect threshold, see [Figure 6](#)

**Figure 6. Typical Idle Threshold vs. SD\_TH resistor value**

## Device Connection Paths

The lanes of the DS100MB201 can be configured either as a 2:1 multiplexer, 1:2 switch or fan-out buffer. The controller side is muxed to the disk drive side. The below table shows the logic for the multiplexer and switch functions.

**Table 3. Logic Table of Switch and Mux Control**

FANOUT	SEL0	SEL1	Function — connection path
0	0	0	DOUT0 connects to SIB0. DOUT1 connects to SIB1. DIN0 connects to SOB0. SOA0 is in idle (output muted). DIN1 connects to SOB1. SOA1 is in idle (output muted).
0	0	1	DOUT0 connects to SIB0. DOUT1 connects to SIA1. DIN0 connects to SOB0. SOA0 is in idle (output muted). DIN1 connects to SOA1. SOB1 is in idle (output muted).
0	1	0	DOUT0 connects to SIA0. DOUT1 connects to SIB1. DIN0 connects to SOA0. SOB0 is in idle (output muted). DIN1 connects to SOB1. SOA1 is in idle (output muted).
0	1	1	DOUT0 connects to SIA0. DOUT1 connects to SIA1. DIN0 connects to SOA0. SOB0 is in idle (output muted). DIN1 connects to SOA1. SOB1 is in idle (output muted).
1	0	0	DOUT0 connects to SIB0. DOUT1 connects to SIB1. DIN0 connects to SOB0 and SOA0. DIN1 connects to SOB1 and SOA1.
1	0	1	DOUT0 connects to SIB0. DOUT1 connects to SIA1. DIN0 connects to SOB0 and SOA0. DIN1 connects to SOA1 and SOB1.
1	1	0	DOUT0 connects to SIA0. DOUT1 connects to SIB1. DIN0 connects to SOA0 and SOB0. DIN1 connects to SOB1 and SOA1.
1	1	1	DOUT0 connects to SIA0. DOUT1 connects to SIA1. DIN0 connects to SOA0 and SOB0. DIN1 connects to SOA1 and SOB1.

## System Management Bus (SMBus) and Configuration Registers

The System Management Bus interface is compatible to SMBus 2.0 physical layer specification. ENSMB must be pulled high to enable SMBus mode and allow access to the configuration registers.

The DS100MB201 has the AD[3:0] inputs in SMBus mode. These pins set the SMBus slave address inputs. The AD[3:0] pins have internal pull-down. When left floating or pulled low the AD[3:0] = 0000'b, the device default address byte is A0'h. Based on the SMBus 2.0 specification, the DS100MB201 has a 7-bit slave address of 1010000'b. The LSB is set to 0'b (for a WRITE), thus the 8-bit value is 101**0** 0000'b or A0'h. The bold bits indicate the AD[3:0] pin map to the slave address bits [4:1]. The device address byte can be set with the use of the AD[3:0] inputs. Below are some examples.

AD[3:0] = 0001'b, the device address byte is A2'h

AD[3:0] = 0010'b, the device address byte is A4'h

AD[3:0] = 0100'b, the device address byte is A8'h

AD[3:0] = 1000'b, the device address byte is B0'h

The SDA, SCL pins are 3.3V tolerant, but are not 5V tolerant. External pull-up resistor is required on the SDA. The resistor value can be from 1 kΩ to 5 kΩ depending on the voltage, loading and speed. The SCL may also require an external pull-up resistor and it depends on the Host that drives the bus.

## TRANSFER OF DATA VIA THE SMBUS

During normal operation the data on SDA must be stable during the time when SCL is High.

There are three unique states for the SMBus:

**START:** A High-to-Low transition on SDA while SCL is High indicates a message START condition.

**STOP:** A Low-to-High transition on SDA while SCL is High indicates a message STOP condition.

**IDLE:** If SCL and SDA are both High for a time exceeding  $t_{BUF}$  from the last detected STOP condition or if they are High for a total exceeding the maximum specification for  $t_{HIGH}$  then the bus will transfer to the IDLE state.

## SMBUS TRANSACTIONS

The device supports WRITE and READ transactions. See Register Description table for register address, type (Read/Write, Read Only), default value and function information.

When SMBus is enabled, all outputs of the DS100MB201 **must write VOD2 register to 0x01 (hex)**. See [Table 4](#) for more information. Each channel must be set to the value of 0x01 (hex) through each register (0x18, 0x26, 0x2E, 0x35, 0x3C, 0x43) to ensure a proper output waveform. The driver Vout voltage is set on a per lane basis using 6 different registers. Each register (0x17, 0x25, 0x2D, 0x34, 0x3B, 0x43) controls the VOD to 600 mV and 800 mV.

## WRITING A REGISTER

To write a register, the following protocol is used (see SMBus 2.0 specification).

1. The Host drives a START condition, the 7-bit SMBus address, and a "0" indicating a WRITE.
2. The Device (Slave) drives the ACK bit ("0").
3. The Host drives the 8-bit Register Address.
4. The Device drives an ACK bit ("0").
5. The Host drive the 8-bit data byte.
6. The Device drives an ACK bit ("0").
7. The Host drives a STOP condition.

The WRITE transaction is completed, the bus goes IDLE and communication with other SMBus devices may now occur.

## READING A REGISTER

To read a register, the following protocol is used (see SMBus 2.0 specification).

1. The Host drives a START condition, the 7-bit SMBus address, and a "0" indicating a WRITE.
2. The Device (Slave) drives the ACK bit ("0").
3. The Host drives the 8-bit Register Address.
4. The Device drives an ACK bit ("0").
5. The Host drives a START condition.
6. The Host drives the 7-bit SMBus Address, and a "1" indicating a READ.
7. The Device drives an ACK bit "0".
8. The Device drives the 8-bit data value (register contents).
9. The Host drives a NACK bit "1" indicating end of the READ transfer.
10. The Host drives a STOP condition.

The READ transaction is completed, the bus goes IDLE and communication with other SMBus devices may now occur.

## RECOMMENDED SMBUS REGISTER SETTINGS

Upon power-up, the default register settings are not configured to an appropriate level. Below is the recommended settings to configure the EQ and VOD to a medium level that supports interconnect length of 10 inches FR4 trace. Please refer to [Table 4](#), [Table 5](#) for additional information and recommended settings.

- Reset the SMBus registers to default values:
  - Write 01'h to 0x00.
- Set output voltage for all lanes:
  - Write 01'h to 0x18, 0x26, 0x2E, 0x35, 0x3C, 0x43.
- Set equalization ~6 dB at 5GHz for all lanes:
  - Write 30'h to 0x0F, 0x16, 0x1D, 0x24, 0x2C, 0x3A.
- Set VOD = 0.8 V<sub>p-p</sub> for all lanes:
  - Write 07'h to 0x17, 0x25, 0x2D, 0x34, 0x3B, 0x42.

**Table 4. Output Driver Register Settings (must write when in SMBus mode)**

Output Value	VOD Control 1 Register Setting (800 mV)	VOD Control 2 Register Setting (must set)	10.3125 Gbps Operation
1V dB	0x07	0x01	10" trace

**Table 5. SMBus Register Map**

Address	Register Name	Bit(s)	Field	Type	Default	Description
0x00	Reset	7:1	Reserved	R/W	0x00	Set bits to 0.

## APPLICATIONS INFORMATION

### GENERAL RECOMMENDATIONS

The DS100MB201 is a high performance circuit capable of delivering excellent performance. Careful attention must be paid to the details associated with high-speed design as well as providing a clean power supply. Refer to the LVDS Owner's Manual for more detailed information on high speed design tips to address signal integrity design issues.

### PCB LAYOUT CONSIDERATIONS FOR DIFFERENTIAL PAIRS

The CML inputs and CML compatible outputs must have a controlled differential impedance of 100Ω. It is preferable to route differential lines exclusively on one layer of the board, particularly for the input traces. The use of vias should be avoided if possible. If vias must be used, they should be used sparingly and must be placed symmetrically for each side of a given differential pair. Route the differential signals away from other signals and noise sources on the printed circuit board. See AN-1187 ([SNOA401](#)) for additional information on WQFN packages.

### POWER SUPPLY BYPASSING

Two approaches are recommended to ensure that the DS100MB201 is provided with an adequate power supply. First, the supply (VDD) and ground (GND) pins should be connected to power planes routed on adjacent layers of the printed circuit board. The layer thickness of the dielectric should be minimized so that the V<sub>DD</sub> and GND planes create a low inductance supply with distributed capacitance. Second, careful attention to supply bypassing through the proper use of bypass capacitors is required. A 0.01 μF bypass capacitor should be connected to each V<sub>DD</sub> pin such that the capacitor is placed as close as possible to the DS100MB201. Smaller body size capacitors can help facilitate proper component placement. Additionally, three capacitors with capacitance in the range of 2.2 μF to 10 μF should be incorporated in the power supply bypassing design as well. These capacitors can be either tantalum or an ultra-low ESR ceramic.

## REVISION HISTORY

Changes from Original (April 2013) to Revision A	Page
• Changed layout of National Data Sheet to TI format .....	<a href="#">17</a>

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
DS100MB201SQ/NOPB	ACTIVE	WQFN	NJY	54	2000	Green (RoHS & no Sb/Br)	CU SN	Level-2-260C-1 YEAR		DS100MB201 SQ	<a href="#">Samples</a>
DS100MB201SQE/NOPB	ACTIVE	WQFN	NJY	54	250	Green (RoHS & no Sb/Br)	CU SN	Level-2-260C-1 YEAR		DS100MB201 SQ	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.

### Products

Audio	<a href="http://www.ti.com/audio">www.ti.com/audio</a>
Amplifiers	<a href="http://amplifier.ti.com">amplifier.ti.com</a>
Data Converters	<a href="http://dataconverter.ti.com">dataconverter.ti.com</a>
DLP® Products	<a href="http://www.dlp.com">www.dlp.com</a>
DSP	<a href="http://dsp.ti.com">dsp.ti.com</a>
Clocks and Timers	<a href="http://www.ti.com/clocks">www.ti.com/clocks</a>
Interface	<a href="http://interface.ti.com">interface.ti.com</a>
Logic	<a href="http://logic.ti.com">logic.ti.com</a>
Power Mgmt	<a href="http://power.ti.com">power.ti.com</a>
Microcontrollers	<a href="http://microcontroller.ti.com">microcontroller.ti.com</a>
RFID	<a href="http://www.ti-rfid.com">www.ti-rfid.com</a>
OMAP Applications Processors	<a href="http://www.ti.com/omap">www.ti.com/omap</a>
Wireless Connectivity	<a href="http://www.ti.com/wirelessconnectivity">www.ti.com/wirelessconnectivity</a>

### Applications

Automotive and Transportation	<a href="http://www.ti.com/automotive">www.ti.com/automotive</a>
Communications and Telecom	<a href="http://www.ti.com/communications">www.ti.com/communications</a>
Computers and Peripherals	<a href="http://www.ti.com/computers">www.ti.com/computers</a>
Consumer Electronics	<a href="http://www.ti.com/consumer-apps">www.ti.com/consumer-apps</a>
Energy and Lighting	<a href="http://www.ti.com/energy">www.ti.com/energy</a>
Industrial	<a href="http://www.ti.com/industrial">www.ti.com/industrial</a>
Medical	<a href="http://www.ti.com/medical">www.ti.com/medical</a>
Security	<a href="http://www.ti.com/security">www.ti.com/security</a>
Space, Avionics and Defense	<a href="http://www.ti.com/space-avionics-defense">www.ti.com/space-avionics-defense</a>
Video and Imaging	<a href="http://www.ti.com/video">www.ti.com/video</a>
