LM2941QML 1A Low Dropout Adjustable Regulator

Check for Samples: **LM2941QML**, **LM2941QML-SP**

FEATURES

- **Available with Radiation Ensure**
  - **ELDRS Free 100 krad(Si)**
- **Output Voltage Adjustable from 5V to 20V**
- **Dropout Voltage Typically 0.5V at I_O = 1A**
- **Output Current in Excess of 1A**
- **Trimmed Reference Voltage**
- **Reverse Battery Protection**
- **Internal Short Circuit Current Limit**
- **Mirror Image Insertion Protection**
- **TTL, CMOS Compatible ON/OFF Switch**

DESCRIPTION

The LM2941 positive voltage regulator features the ability to source 1A of output current with a typical dropout voltage of 0.5V and a maximum of 1V over the entire temperature range. Furthermore, a quiescent current reduction circuit has been included which reduces the ground pin current when the differential between the input voltage and the output voltage exceeds approximately 3V. The quiescent current with 1A of output current and an input-output differential of 5V is therefore only 30mA. Higher quiescent currents only exist when the regulator is in the dropout mode ($V_I - V_O \leq 3V$).

Originally designed for vehicular applications, the LM2941 and all regulated circuitry are protected from reverse battery installations or two-battery jumps. During line transients, such as load dump when the input voltage can momentarily exceed the specified maximum operating voltage, the regulator will automatically shut down to protect both the internal circuits and the load. Familiar regulator features such as short circuit and thermal overload protection are also provided.

Figure 1. 16-Lead CFP Package

Equivalent Schematic Diagram

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings[1]

Input Voltage (Survival Voltage, ≤ 100ms)			60V
Internal Power Dissipation[2]			Internally Limited
Maximum Junction Temperature			150°C
Storage Temperature Range			−65°C ≤ T_J ≤ +150°C
Lead Temperature (Soldering, 10 seconds)			300°C
Thermal Resistance	θ_{JA}	CFP "WG" (device 01, 02) (Still Air)	122°C/W
		CFP "WG" (device 01, 02) (500LF/Min Air Flow)	77°C/W
		CFP "GW" (device 03, 04) (Still Air)	136°C/W
		CFP "GW" (device 03, 04) (500LF/Min Air Flow)	87°C/W
	θ_{JC}	CFP "WG" (device 01, 02)[3]	5°C/W
		CFP "GW" (device 03, 04)	13°C/W
Package Weight (Typ)		CFP "WG" (device 01, 02)	360mg
		CFP "GW" (device 03, 04)	410mg
ESD susceptibility to be determined[4]			500V

(1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For specified specifications and test conditions, see the Electrical Characteristics. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.

(2) The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{Jmax} (maximum junction temperature), θ_{JA} (package junction to ambient thermal resistance), and T_A (ambient temperature). The maximum allowable power dissipation at any temperature is $P_{Dmax} = (T_{Jmax} - T_A)/\theta_{JA}$ or the number given in the Absolute Maximum Ratings, whichever is lower.

(3) The package material for these devices allows much improved heat transfer over our standard ceramic packages. In order to take full advantage of this improved heat transfer, heat sinking must be provided between the package base (directly beneath the die), and either metal traces on, or thermal vias through, the printed circuit board. Without this additional heat sinking, device power dissipation must be calculated using θ_{JA}, rather than θ_{JC}, thermal resistance. It must not be assumed that the device leads will provide substantial heat transfer out of the package, since the thermal resistance of the lead frame material is very poor, relative to the material of the package base. The stated θ_{JC} thermal resistance is for the package material only, and does not account for the additional thermal resistance between the package base and the printed circuit board. The user must determine the value of the additional thermal resistance and must combine this with the stated value for the package, to calculate the total allowed power dissipation for the device.

(4) Human body model, 1.5 kΩ in series with 100 pF.

Recommended Operating Conditions

Maximum Input Voltage	26V
Temperature Range	−55°C ≤ T_A ≤ 125°C

LM2941 Electrical Characteristics DC Parameters

The following conditions apply, unless otherwise specified.
DC: $5V \leq V_O \leq 20V$, $V_{IN} = V_O + 5V$, $C_O = 22\mu F$

Parameter		Test Conditions	Notes	Min	Max	Unit	Sub-groups
V_{Ref}	Reference Voltage	$5mA \leq I_O \leq 1A$		1.237	1.313	V	1
				1.211	1.339	V	2, 3
V_{RLine}	Line Regulation	$V_O + 2V \leq V_{IN} \leq 26V$, $I_O = 5mA$	See[1]		10	mV/V	1, 2, 3
V_{RLoad}	Load Regulation	$50mA \leq I_O \leq 1A$, $V_{IN} = 10V$, $V_{OUT} = 5V$	See[1]		10	mV/V	1, 2, 3
		$50mA \leq I_O \leq 1A$, $V_{IN} = 25V$, $V_{OUT} = 20V$			10	mV/V	1, 2, 3
I_Q	Quiescent Current	$V_O + 2V \leq V_{IN} \leq 26V$, $I_O = 5mA$			15	mA	1
					20	mA	2, 3
		$V_{IN} = V_O + 5V$, $I_O = 1A$			45	mA	1
					60	mA	2, 3
V_{DO}	Dropout Voltage	$I_O = 1A$			0.8	V	1
					1.0	V	2, 3
		$I_O = 100mA$			200	mV	1
					300	mV	2, 3
I_{SC}	Short Circuit Current	$V_{IN\ Max} = 26V$		1.6	3.5	A	1
				1.3	3.7	A	2, 3
	Maximum Operational Input Voltage		See[2]		26	V_{DC}	1, 2, 3
	Reverse Polarity DC Input Voltage	$R_O = 100\Omega$, $V_O \geq -0.6V$	See[3]	-15		V	1, 2, 3
$V_{TH\ On}$	ON/OFF Threshold Voltage ON	$I_O \leq 1A$	See[3]		0.8	V	1, 2, 3
$V_{Th\ Off}$	ON/OFF Threshold Voltage OFF	$I_O \leq 1A$	See[3]	2.00		V	1, 2, 3
	ON/OFF Threshold Current	$V_{ON/OFF} = 2.0V$, $I_O \leq 1A$			100	µA	1
					300	µA	2, 3

(1) Limit = mV per volt of V_O.
(2) Condition for V_{IN}
(3) Functional test go-no-go only.

LM2941 Electrical Characteristics AC Parameters

The following conditions apply, unless otherwise specified.
AC: 5V ≤ V_O ≤ 20V, V_{IN} = V_O+5V, C_O = 22µF

Parameter		Test Conditions	Notes	Min	Max	Unit	Sub-groups
	Maximum Line Transient	$V_{O\ Max}$ 1V above nominal V_O, R_O = 100Ω, t ≤ 100mS			60	V	4, 5, 6
	Reverse Polarity Transient Input Voltage	t ≤ 100mS, R_O = 100Ω			-50	V	4, 5, 6
RR	Ripple Rejection	f_O = 1KHz, 1 V_{RMS}, I_L = 100mA	See[1]		0.02	%/V	4
		f_O = 1KHz, 1 V_{RMS}, I_L = 100mA	See[1]		0.04	%/V	5, 6

(1)   %/V = % of V_{IN} per Volt of V_O.

LM2941 Electrical Characteristics DC Drift Parameters

The following conditions apply, unless otherwise specified.
DC: 5V ≤ V_O ≤ 20V, V_{IN} = V_O+5V, C_O = 22µF
Delta calculations performed on QMLV devices at group B , subgroup 5.

Parameter		Test Conditions	Notes	Min	Max	Unit	Sub-groups
V_{Ref}	Reference Voltage	5mA ≤ I_O ≤ 1A		-25	+25	mV	1

Typical Applications
$$V_{OUT} = \text{Reference voltage} \times \frac{R1 + R2}{R1} \text{ where } V_{REF} = 1.275 \text{ typical}$$

$$\text{Solving for R2: } R2 = R1 \left(\frac{V_O}{V_{REF}} - 1 \right)$$

Note: Using 1KΩ for R1 will ensure that the input bias current error of the adjust pin will be negligible. Do not bypass R1 or R2. This will lead to instabilities.

* Required if regulator is located far from power supply filter.

** C_O must be at least 22µF to maintain stability. May be increased without bound to maintain regulation during transients. Locate as close as possible to the regulator. This capacitor must be rated over the same operating temperature range as the regulator and the ESR is critical; see curve.

Figure 18. 5V to 20V Adjustable Regulator
*** To assure shutdown, select Resistor R3 to ensure at least 300µA of pull-up current when S1 is open. (Assume 2V at the ON/OFF pin.)

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
